

Altivar 61 Plus

90 ... 2400 kW

Configuration guide

English

04/2010

General remarks

The following symbols should assist you in handling the instructions:

Advice, tip !

General information, note exactly !

The requirements for successful commissioning are correct selection of the device, proper planning and installation. If you have any further questions, please contact the supplier of the device.

Capacitor discharge !

Before performing any work on or in the device, disconnect it from the mains and wait at least 15 minutes until the capacitors have been fully discharged to ensure that there is no voltage on the device.

Automatic restart !

With certain parameter settings it may happen that the frequency inverter restarts automatically when the mains supply returns after a power failure. Make sure that in this case neither persons nor equipment is in danger.

Commissioning and service !

Work on or in the device must be done only by duly qualified staff and in full compliance with the appropriate instructions and pertinent regulations. In case of a fault contacts which are normally potential-free and/or PCBs may carry dangerous voltages. To avoid any risk to humans, obey the regulations concerning "Work on Live Equipment" explicitly.

Terms of delivery

The latest edition "General Terms of Delivery of the Austrian Electrical and Electronics Industry Association" form the basis of our deliveries and services.

Specifications in this document

We are always anxious to improve our products and adapt them to the latest state of the art. Therefore, we reserve the right to modify the specifications given in this document at any time, particular those referring to weights and dimensions. All planning recommendations and connection examples are non-binding suggestions for which we cannot assume liability, particularly because the regulations to be complied depend on the type and place of installation and on the use of the devices.

All foreign-language translations result from the German or English version. Please consider those in case of unclarity.

Basis of contract

The specifications in text and drawings of this document are no subject of contract in the legal sense without explicit confirmation.

Regulations

The user is responsible to ensure that the device and its components are used in compliance with the applicable regulations. It is not permitted to use these devices in residential environments without special measures to suppress radio frequency interferences.

Trademark rights

Please note that we do not guarantee that the connections, devices and processes described herein are free from patent or trademark rights of third parties.

Frequency inverter standard enclosures

The ATV61 Plus "Simplified version" is an optimised concept for enclosures that guarantees delivery dates as short as possible due to the standardised components!

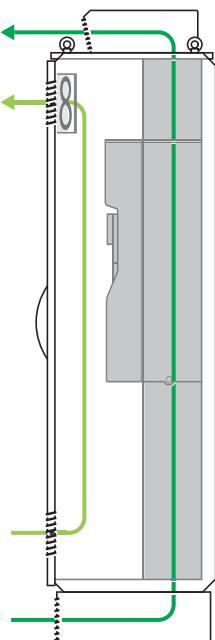

The cooling concept IP54 with separated air flow for power part and control part of the frequency inverter provides manifold applications for this inverter series.

Configuration features of the "Simplified version"

These Altivar enclosure units are an extension to the Altivar frequency inverter offer. The basic equipment contains a frequency inverter ATV61 or ATV71, a circuit breaker and a DC choke to reduce the harmonics.

The design is based on the standard enclosure system Sarel S6000 with an enclosure plinth which is 200 mm high and an operating panel integrated into the enclosure door.

Device features

Enclosure system

The Sarel S6000 enclosure system with additional internal reinforcement elements and slide bars for easy installation and removal of the inverter devices and other power components can be added to any existing enclosure systems.

Cooling concept

In case of protection degree IP54 with separate air channel the cooling air inlet for the power part takes place through the plinth and the air outlet through the enclosure roof. The control part is cooled by filter fans in the cubicle door.

Operation / parameterization

For safe control, clear parameterization and fast diagnosis, the operating panel is installed in the enclosure door at an ideal height. A transparent protective cover and an adjustable locking code prevent the unintended parameter adjustments.

Connection

The power cables are connected at the mains side directly at the circuit breaker. There are terminals or bars provided for the motor output. The cables are to be connected at the bottom.

Enclosure design 400 V "Simplified version"

General technical data

Mains voltage	400 (380, 415) V $\pm 10\%$, 50/60 Hz $\pm 5\%$ for TT, TN-C, TN-S or IT networks
Maximum current	120 % for 60 s per 10 minutes, 135 % for 2 seconds
Operating temperature	0 ... +40°C, up to +50°C with derating possible
Standards	CE, EMC filter for 2: "industrial environment" C3 integrated
General design	Enclosure system S6000 in RAL 7032, enclosure plinth in RAL 7022 Controls in the enclosure door with additional protective cover, Cable entry from below, enclosure depth 616 mm (659 mm incl. door handle)
Interfaces	Control terminals directly at the inverter, fieldbus connection via Modbus or CANopen

ATV61ES5•••N4

IP54SA with separated air flow	Air flow through enclosure plinth and mounted air guidance hood, cooling of the control part by means of filter fans in the enclosure door, enclosure height of 2359 mm (incl. 200 mm plinth)
Standard equipment	Frequency inverter ATV61, circuit breaker, DC coke, motor terminals, terminals for external braking resistor (only ATV61ES5D90N4 ... ATV61ES5C22N4), operating panel in the door
Options	There are no options available for the "Simplified version" design!

Frequency inverter standard enclosures

The concept of the Altivar enclosure units offers standard enclosures ready to connect. The modular construction makes it possible to adapt the enclosure to the individual requests. The economic enclosure version makes the planning easy and ensures a quick installation and commissioning of the drive.

Basic equipment of the Altivar enclosure units

The Altivar enclosure units are an extension to the Altivar frequency inverter offer. The basic equipment contains a frequency inverter ATV61 or ATV71, semiconductor fuses, a main switch, a choke to reduce the harmonics and terminals. The design is based on the enclosure system Sarel S6000 with the operating panel built-in into the door.

The control is located on a spacious swing frame. That ensures compact dimensions, nevertheless it is enough space for additional extensions and accessibility in case of maintenance.

Device features

Enclosure system

The Sarel S6000 enclosure system with additional internal reinforcement elements and slide bars for easy installation and removal of the inverter devices and other power components can be added to any existing enclosure systems.

Operation / parameterization

For safe control, clear parameterization and fast diagnosis, the operating panel is installed in the enclosure door at an ideal height. A transparent protective cover and an adjustable locking code prevent the unintended parameter adjustments.

Displays on the enclosure

Permanently present status displays that show the actual device state at any time.

Up to 5 analog actual values can be parameterized for the display and thus provide information on the relevant drive data at any time.

Connection

Generous space is provided to connect the power cables. The extensibility and accessibility of the control terminals is also taken into consideration.

In the standard design, the cables are to be connected at the bottom of the inverter.

Extensibility

All enclosure units are equipped with a large, swivelling control panel that permits subsequent extensions.

Enclosure design

Altivar 61 Plus

Drive Systems

Mains voltage 690 V

The product designation of the Altivar frequency inverters consists of several points of reference (characters and figures). The meaning of each point is illustrated in the following example.

Order process for standard enclosures "Configured drive systems"

1. Choose the standard enclosure on the basis of the voltage, the power and the protection degree first.
e.g. mains voltage: 400 V; motor power: 315 kW; protection degree IP54 compact

– 1x ATV61EXC5C31N4 Standard enclosure in protection degree IP54 compact

2. Now you can select the desired options, which should be installed into the enclosure in the factory, by means of the option lists.

– 1x VW3 AE 0104 Door handle for main switch
– 1x VW3 AE 1601 Enclosure lighting

 Some options affect the dimensions of the enclosure. Please observe chapter "Width of the cubicle", page 179 for this purpose.

3. List the enclosure unit including the respective options in the order:

– 1x ATV61EXC5C31N4 Standard enclosure in protection degree IP54 compact
– 1x VW3 AE 0104 Door handle for main switch
– 1x VW3 AE 1601 Enclosure lighting

 Specify only one standard enclosure including the respective options per order! Otherwise the assignment of the options to be installed is not possible!

 Enclosure options cannot be ordered on its own! This is only possible in combination with a standard enclosure!

4. When you want to order the same enclosure configuration several times, you can simply multiply the individual positions.

– 3x ATV61EXC5C31N4 Standard enclosure in protection degree IP54 compact
– 3x VW3 AE 0104 Door handle for main switch
– 3x VW3 AE 1601 Enclosure lighting

Request and order of "Flexible drive systems" enclosures

For all orders which contain "Options on request" or special options, proceed as follows.

- Choose the standard enclosure on the basis of the voltage, the power and the protection degree.
e.g.: mains voltage: 690 V; motor power: 2400 kW; protection degree IP54 with internal cooling circuit

– 1x ATV61EXA5M24Y	Standard enclosure in protection degree IP54 with internal cooling circuit
--------------------	--

- Now you can select the desired options, which should be installed into the enclosure afterwards, by means of the option lists.
Additionally specify your requests.

– 1x VW3 AE 1601	Enclosure lighting
– 1x VW3 AE 2420	12-pulse supply
– 1x <i>on request</i>	Special colour RAL7035 "Light grey"
– 1x <i>on request</i>	Cable entry via the top

 Some options affect the dimensions of the enclosure. Please observe chapter "Width of the cubicle", page 179 for this purpose.

- List the enclosure unit including the respective options for the request. Send this request to Schneider Electric Power Drives.

– 1x ATV61EXA5M24Y	Standard enclosure in protection degree IP54 with internal cooling circuit
– 1x VW3 AE 1601	Enclosure lighting
– 1x VW3 AE 2420	12-pulse supply
– 1x <i>on request</i>	Special colour RAL7035 "Light grey"
– 1x <i>on request</i>	Cable entry via the top

 Specify additionally the requirements for the special design in the request!

- You will receive a quotation with a quotation number (e.g. VA-1002-09A-AL) including transfer price (net price), delivery time, terms of delivery and technical descriptions to the individual positions.

- Please always quote in the order "ATVCBL" as reference. Add the quotation number and the position in the description.

– 1x ATVCBL	as per quotation number VA-1002-09A-AL (position 1)
-------------	---

 It is absolutely necessary to quote the position in addition to the quotation number so that the amount of the order is well-defined!

Purchase order

Altivar 61 Plus

Drive Systems

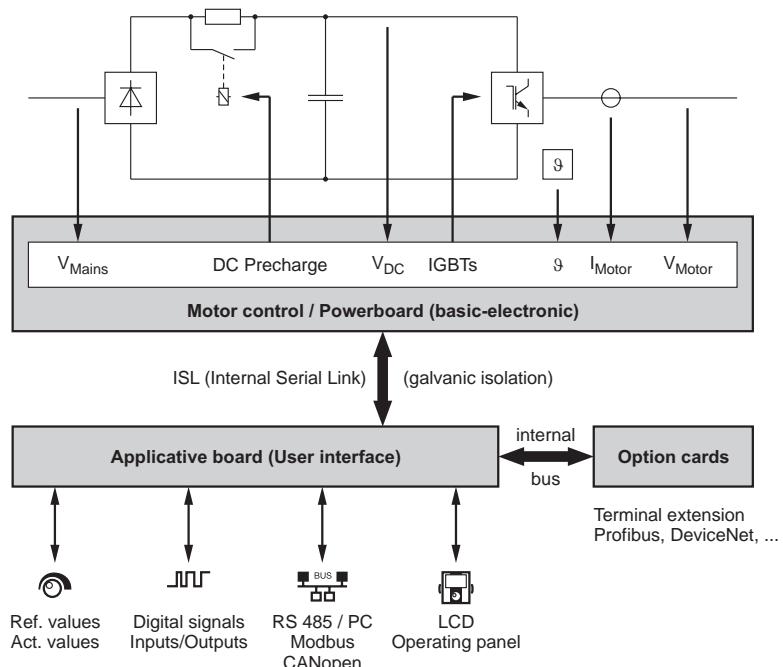

Altivar frequency inverters use modern components and solutions for the control of asynchronous three-phase motors and synchronous three-phase motors. This enables an extremely compact design and userfriendly device features.

Our high degree of quality awareness ranges from the basic requests in the product specification over the development of the cooling system, of the mechanical design, of the electrical circuit diagram and the individual functions up to the production of the device. This quality level is also long-term guaranteed by means of the corresponding quality assurance systems in the individual business processes and is certified every year by independent authorities according to DIN EN ISO 9001.

The range of Altivar 61 frequency inverters has been developed especially for applications in the area of industrial and commercial buildings (ventilation, air conditioning and pump technology). Due to the integrated energy saving function a reduction of the operating costs is permitted by improved power consumption.

The Altivar 71 is equipped with several motor control methods and numerous integrated functions. Thus it meets the highest demands in industry, machine building and automation.

Altivar frequency inverters are independent working devices with internal supply of the control and forced ventilation. They feature alternatively an integrated LED operating panel or a removable operating panel with large LCD display and extensive control terminals.

Depending on the local conditions and the requests on the drive the basic device can or must be supplemented by options. Options for the power path, options for control and operation as well as mechanical options are available.

Altivar frequency inverters fulfil the relevant international standards and regulations of the EN-standard, IEC-standards up to UL and CSA regulations.

CE Marking

All devices and drives of the electric drive engineering may cause electromagnetic interferences and otherwise they may be influenced by such interferences. Therefore, they are subject to the EMC directive 2004/108/EC since 1.1.1996.

The frequency inverters have an operating voltage which is clearly in the range of 50...1000 V AC or 75...1500 V DC. Therefore, they are also subject to the Low-voltage directive 2006/95/EC since 1.1.1997.

Because of the EMC filters which are built into the frequency inverters they are in conformity with EN 61800-3 and EN 61800-5-1.

Frequency inverters are not considered as machines with at least one mechanically moving part. Therefore, they are not subject to the Machine directive 2006/42/EC.

Frequency inverters are a product of the restricted sales according to IEC 61800-3. In a residential environment this product can cause radio frequency interferences whereupon the user can be called on to take suitable measures.

The frequency inverters have a CE marking on the rating plate. However, it is necessary to observe the installation regulations to achieve the corresponding limits.

Installation regulations

- The frequency inverters have a basic radio frequency interference filter for grounded mains built-in.
- Take care of good HF connection between motor cable screen and filter.
- Use of screened motor cables, proper connection of the motor cables on both ends or proper laying in a metallic, closed and interconnected cable conduit
- Use of a motor choke in case of high motor cable lengths
- Use and proper connection of screened control cables
- Grounding of the frequency inverter for human protection
- Consider the protective separation when preparing control lines and coupling relays
- Laying of the motor cables separated from other cables, especially from the control wiring

Machine safety

The function "Safe Standstill" (page 152) is available as selectable option in various safety and stop categories. So an optimal adaptation of the drive to the required safety category for the machine is possible.

Following variants of the option "Safe Standstill" are selectable:

- **Safety category 1 with stop category 0**
alternatively with line contactor or safety input at the inverter
- **Safety category 3 with stop category 0**
with Preventa safety relay
- **Safety category 3 with stop category 1**
with Preventa safety relay and monitored deceleration of the drive

For all selectable safety options the implementation of external safety-relevant contacts is provided. So the ATV61 Plus does not act as a closed safety system in terms of the Machine directive and safety standards EN/IEC 61508, EN 954-1, ISO 13849-1 and NF EN 62061. It has to be accounted as component in any case. The safety-relevant components which are installed in the ATV61 Plus and their safety-relevant functionality have to be included in the whole machine safety by the engine builder.

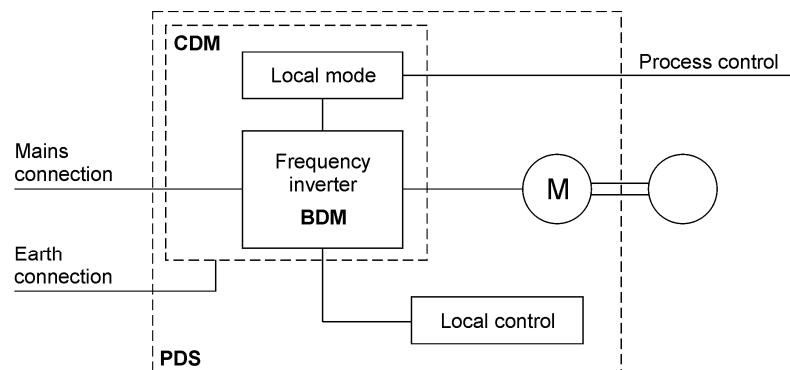

EMC product standard for PDS (Power Drive Systems) EN 61800-3

For frequency inverter drives the product standard EN/IEC 61800-3 edition 1 and 2 appeared. It has first priority over the existing general standards (generic standards). If a drive is installed into another device for which a separate EMC product standard exists, then this standard applies.

The aim of the **EMC directive 2004/108/EEC** is the ability of electric and electronic installations to operate satisfactorily in their electromagnetic environment without influencing the environment or other loads therein.

Therefore, the PDS product standard contains both limits for admissible interferences and requirements for the necessary interference resistance.

The power drive standard EN 61800-3 covers the complete drive from the mains supply to the motor shaft.

BDM: Base-Drive-Module

Basic drive consisting of the power part and the control electronics (e.g. frequency inverter - built-in unit)

CDM: Complete-Drive-Module

Drive modules consisting of BDM (basic drive) and extensions, if existing (e.g. enclosure including EMC filter, motor choke, line contactor, ...)

PDS: Power-Drive-System

Drive system consisting of CDM (drive module) and motor, motor cable, local control, power transformer, ... (e.g. the complete electric drive of a machine)

The differentiation in respect of the sales method and the range of use is essential for the handling of frequency inverters.

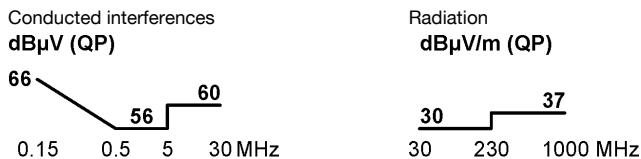

Use in residential environment

Drives that are connected without an intermediate transformer to the power supply network which also supplies residential areas. The standard refers to these application areas as "first environment".

The valid limits for interferences are very low and can only be observed by compliance with all installation instructions.

Category C1

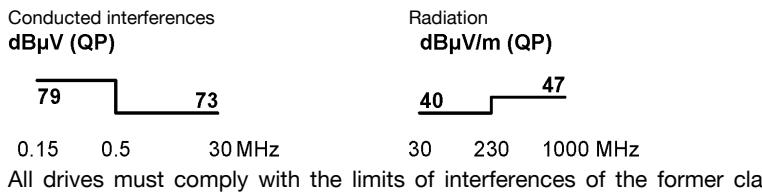

Use in residential environments with general sales (unrestricted to every person)

The admissible limits for interferences comply with the applied standard EN 55011 class B; i.e. 66-56/56/60 dB(μ V) quasi-peak and 30/37 dB(μ V/m) at a distance of 10 m.

Category C2

Use in residential environments with restricted sales (only EMC qualified resellers)

All drives must comply with the limits of interferences of the former class A group 1.

i.e. 79/73/73 dB(μ V) quasi-peak and 40/47 dB(μ V/m) at a distance of 10 m

Use in industrial environment

The standard refers to these application areas as "second environment". These are areas that are separated from the public network by means of an own transformer. The user must ensure that the suppression components recommended by the manufacturer are used and that the introductions of the manufacturer are observed. Moreover, the user must ensure that strong interferences do not couple into neighbouring low-voltage networks.

If the neighbouring network is a public network with residential areas, the limits 66-56/56/60 dB(μ V) quasi-peak apply. In case of industrial networks the higher limits 79/73/73 dB(μ V) quasi-peak can be used.

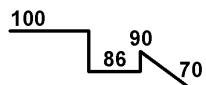

Furthermore, it is necessary to enhance the suppression of interferences if other devices are influenced. The operator of the plant is responsible for this improvement.

The limits for immunity are much stricter because they are based on a generally higher level of interferences.

Category C3

Use in industrial environments

Conducted interferences
drive \leq 100 A
dB μ V (QP)

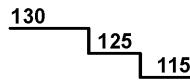

Radiation

dB μ V/m (QP)

30 230 1000 MHz

For drives with a size \leq 100 A the admissible limits for interferences are 100/86/90-70 dB(μ V) quasi-peak and 50/60 dB(μ V/m) at a distance of 10 m (class A group 2).

Conducted interferences
drive $>$ 100 A
dB μ V (QP)

Radiation

dB μ V/m (QP)

30 230 1000 MHz

For drives with a size $>$ 100 A the admissible limits for interferences are 130/125/115 dB(μ V) quasi-peak and 50/60 dB(μ V/m) at a distance of 10 m (class A group 2).

Category C4Use in industrial environments for drives $>$ 1000 V or $>$ 400 A

For these drives are no limits defined. An EMC concept has to be compiled within project planning.

In case of non-grounded mains it is usually not possible to keep the limits. Filter capacitors make detection of insulation faults difficult and thus they interfere with the concept of a floating power supply. However, filters that are developed especially for IT mains can be used because they also cause a high reduction of the conducted interferences in non-grounded mains.

The basic requirements for compliance with the relevant limits are the observance and compliance of the installation requirements and the use of the recommended options.

Mains voltage

The Altivar devices are designed for the following mains voltages:

- ATV61ES5•••N4: 3 AC 400 (380, 415) V \pm 10 %, 50/60 Hz \pm 5 %
- ATV61EX••••N4: 3 AC 400 (380, 415) V \pm 10 %, 50/60 Hz \pm 5 %
- ATV61EX••••N: 3 AC 500 (525) V \pm 10 %, 50/60 Hz \pm 5 %
- ATV61EX••••Y: 3 AC 690 V \pm 10 %, 50/60 Hz \pm 5 %

The existing nominal mains voltage must be set at the inverter by means of a parameter. Thereby an optimal adjustment of the undervoltage protective function takes place.

Braking unit / Braking resistor

The Altivar frequency inverters have parameters to monitor the braking power.

-  If the braking resistor does not match the overload characteristic to be used or the local regulations require an additional protective device, a thermal relay should be integrated into the mains disconnection mechanism.

The correct setting of the braking parameters is essential for the protection of the braking resistor in normal operation. In case of malfunction of the internal braking transistor or of the external braking unit, the braking resistor can be only protected by mains disconnection. Therefrom, a line contactor is necessary when using the braking function. Furthermore, the use of the function "Line contactor control" is recommended.

Nongrounded mains

The use of the Altivar frequency inverters is basically in all network variants permitted. But the Altivar frequency inverters with a mains voltage of 500 V or 690 V must not be operated in "Corner Grounded Networks".

With the option "Design for IT networks" (page 155) the frequency inverter is prepared for connection to non-grounded networks.

In case of nongrounded networks a single earth fault in the supplying mains has no effect to the function of the inverter. If the earth fault occurs in the motor or the motor cables, the inverter is switched off. But the recognition heavily depends on the earth capacitance of the mains.

-  Especially for IT networks the option "Insulation monitoring for IT networks" is available. This option monitors each phase to earth fault. See page 155.

-  Due to human protection, in IT networks only the use of special RFI filters with very low leakage current is permitted (increase of earth capacitance, ...).

Radio interferences

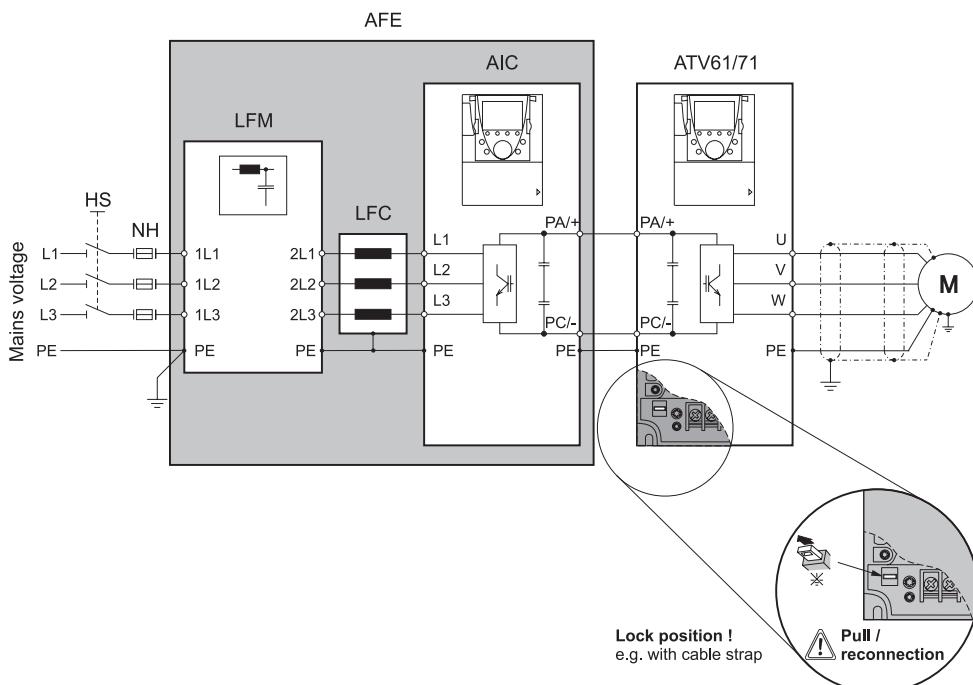

The frequency inverters include an EMC filter built-in as standard. This filter complies with the requirements for category "C3 – Industrial environments" according EN/IEC 61800-3 (in the past: EN 55011 class A group 2).

-  Frequency inverters are a product of the restricted sales according to IEC 61800-3. In a residential environment this product can cause radio frequency interferences whereupon the user can be called on to take suitable measures.

Operation in combination with an active front end

It is absolutely necessary to carry out the following settings for all frequency inverters connected to an Active Front End:

- **RFE** [Regen. connection] in menu [1.7 APPLICATION FUNCT.] (FUn-) in submenu [REGEN. CONNECTION] (Olr-)
Setting: [Yes] (YES)
Thereby the undervoltage level of the frequency inverter is adapted to the operation with the Active Front End.
Please contact our service team if this parameter is not available in the parameter list of your device!
- **brr** [Braking balance] in menu [1.7 APPLICATION FUNCT.] (FUn-) in submenu [RAMP TYPE] (rPt-)
Setting: [No] (nO)
- **dEC** [Deceleration] in menu [1.7 APPLICATION FUNCT.] (FUn-) in submenu [RAMP TYPE] (rPt-)
For dynamic processes a very short deceleration ramp can cause an overload on the DC-bus with an overvoltage fault shutdown.
This can be prevented by an extension or rounding of the deceleration ramp (parameters $\text{LR}3$ [Begin Dec round]; $\text{LR}4$ [End Dec round]).
- **UrE5** [Mains voltage] in menu [1.8 FAULT MANAGEMENT] (FLt-) in submenu [UNDERVOLTAGE MGT.] (Usb-)
Same setting as the Active Front End.
Thereby the internal voltage levels of the frequency inverter are adapted.
- **IPL** [Input phase loss] in menu [1.8 FAULT MANAGEMENT] (FLt-) in submenu [INPUT PHASE LOSS] (OPL-)
Setting: [Ignore] (nO)
- **bUb** [Brake res. fault Mgt] in menu [1.8 FAULT MANAGEMENT] (FLt-) in submenu [BU PROTECTION] (bUF-)
Setting: [Ignore] (nO)
- **LCL** [2 wire type] in menu [1.5 INPUTS/OUTPUTS CFG] (I-O-)
Setting: [Level] (LEL)
In order to ensure an automatic restart by the AFE after an undervoltage recognition. An automatic restart only possible with 2-wire control.
- **RFI filter**
The integrated RFI filter has to be deactivated (position IT, non-grounded mains) at all devices because there exists no direct mains connection of the frequency inverter in case of operation with an Active Front End.

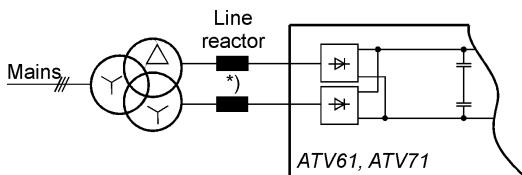

12-pulse supply

The frequency inverters of the enclosure units ATV61EXA••••• are standard equipped with two parallel input rectifiers. Thus it is easy to equip them with 12-pulse rectification optionally.

The supply results from a separate transformer with two out-of-phase secondary windings (e.g. superimposing transformer Yy6 Yd5).

If the existing mains distortion is mainly caused by frequency inverters with normal 6-pulse-circuit, a superimposing transformer in zig-zag-connection ($\pm 15^\circ$ phase shift at each secondary windings e.g. Yy1130 Yy0030) will be highly recommended.

On the main side of the transformer the 5th and 7th current harmonics are practically non-existent as they have been cancelled by the shifted transformer windings.

*)

Line reactors are only necessary if a transformer is used for several inverters or if the transformer power is notably larger than the inverter power (see chapter "Mains impedance / Short-circuit current", page 28).

The following specifications must be kept at a minimum in order to ensure trouble-free operation and even current sharing:

Transformer:

- Converter transformer for 12-pulse supply with two non-controlled rectifier bridges in a common voltage DC link.
- Recommended design: superimposing
- Nominal voltage at the primary side: according to application
- Voltage adaptation at the primary side: +5% / +2.5% / 0 / -2.5% / -5%
- Nominal output current: see the following table
- Current harmonics at the secondary side: see the following table
- Nominal output voltage (= no-load voltage): see the following table
- Tolerance of the secondary voltages to each other: < 0.3% (< 0.1%) of V_{NOM}
- Short circuit voltage: see the following table
- Tolerance of the relative short circuit voltage: $\pm 10\%$ of v_{SC_NOM}
- Tolerance of the relative short circuit voltage between both secondary windings: < 5% (< 2%) of v_{SC_NOM}
- Further specifications: according to the application
- Tolerance for unbalance of phaseshift: $(\pm 0.5^\circ)$

Mains:

- allowed mains distortion: $THD(u) < 5\%$
- max. single harmonic (5th): < 3%

()Values in brackets for transformer in zig-zag-connection ($\pm 15^\circ$ phase shift at both secondary windings e.g. Yy1130 Yy0030)

()Values in brackets for transformer in zig-zag-connection ($\pm 15^\circ$ phase shift at both secondary windings e.g. Yy1130 Yy0030)

Recommended output voltage for the transformer

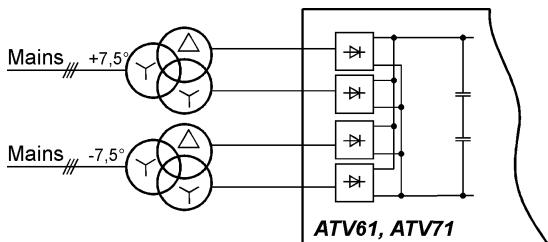

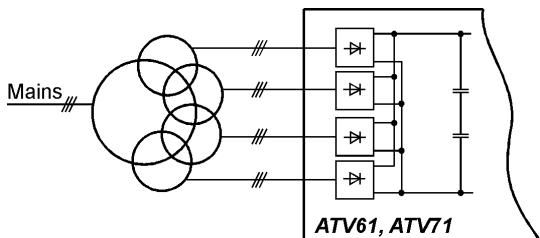

The nominal output voltage of a transformer is specified at no load operation. Therefore this value should be 3...5 % higher than the rated voltage of the drive.

Inverter	Transformer output voltage phase / phase (no load)							
	Nominal voltage 380V	Nominal voltage 400V	Nominal voltage 440V	Nominal voltage 480V	Nominal voltage 500V	Nominal voltage 600V	Nominal voltage 690V	
400 V range	400V	425V	460V	500V	-	-	-	
690 V range	-	-	-	-	525V	630V	715V	

24-pulse supply

The frequency inverters of the following enclosure units are standard equipped with four parallel input rectifiers. Thus it is easy to equip them with 24-pulse rectification optionally:

- from ATV61EXA•C90N4
- from ATV61EXA•M11N
- from ATV61EXA•M15Y

The supply results from a separate transformer with four secondary windings each separated by 15°.

Alternatively the supply can also occur via two transformers each with two out-of-phase secondary windings (e.g. superimposing transformer Yy6 Yd5) and a phase displacement of +7.5° and -7.5° at the primary winding.

The symmetry of the two transformers is a major factor for reducing the harmonics.

On the medium voltage line the 5th, 7th, 11th, 13th, 17th and 19th current harmonics are practically non-existent as they have been cancelled by the shifted transformer windings.

The following specifications must keep at a minimum in order to ensure trouble-free operation and even current sharing:

Transformer:

- Converter transformer(s) for 24-pulse supply with four non-controlled rectifier bridges in a common voltage DC link.
- Recommended design: superimposing
- Nominal voltage at the primary side: according to application
- Voltage adaptation at the primary side: +5% / +2.5% / 0 / -2.5% / -5%
- Nominal output current: see the following table
- Current harmonics at the secondary side: see the following table
- Nominal output voltage (= no-load voltage): see the following table
- Tolerance of the secondary voltages to each other: < 0.3% (< 0.1%) of V_{NOM}
- Short circuit voltage: see the following table
- Tolerance of the relative short circuit voltage: $\pm 10\%$ of v_{SC_NOM}
- Tolerance of the relative short circuit voltage between both secondary windings: < 5% (< 2%) of v_{SC_NOM}
- Further specifications: according to the application
- Tolerance for unbalance of phaseshift: $(\pm 0.5^\circ)$

Mains:

- allowed mains distortion: THD(u) < 5%
- max. single harmonic (5th): < 3%

690 V range	—	—	—	—	525V	630V	715V	—

Mains current harmonics / Mains voltage distortion

Because of using a diode rectifier on the input of the inverter harmonics occur in the mains current which lead to a voltage distortion of the supplying mains.

There are DC chokes or line reactors available for the enclosure unit in order to reduce these current harmonics and to decrease the total mains current.

Mains impedance / Short-circuit current

The frequency inverters are designed considering a maximal permitted mains short-circuit current of the supply (values see technical data of the respective frequency inverter).

Optionally the devices can be also designed for higher mains short-circuit currents.

Power factor correction systems

Frequency inverters cause current harmonics in the supplying mains. When a power factor correction system is used, their capacitors are additionally stressed by means of the harmonics.

To protect against overload, we recommend the installation of chokes for those parts.

Switching rate

Altivar frequency inverters can be directly switched on and off by means of the line contactor which can be easily controlled via a relay output of the inverters.

In case of frequent start/stop commands it is recommended to realize them by means of the logic control inputs (or via a serial bus) directly to the electronics of the inverter.

By means of the certificated control input "PWR" a "Safe Standstill" of the drive is guaranteed considering the safety category according to EN 954-1 / ISO 13849-1 (and IEC/EN 61800-5-2). Thus a line or motor contactor can be saved.

Inverter control	Switching rate
The inverter is controlled by means of connecting and disconnecting the line supply voltage.	max. 60 switching operations per hour (safety category 1, stop category 0)
Electronic start/stop commands by means of the logic inputs of the inverter	arbitrary
Electronic lock of the inverter by means of the control input PWR "Safe Standstill"	arbitrary (safety category 3, stop category 0 or 1)

Responsibility

The users are responsible to integrate the frequency inverters into the protection and safety concept of the plant or machine.

All stated connection recommendations and planning remarks are to be taken merely as suggestions which must be adapted to the local conditions and regulations concerning installation and usage.

This applies especially to the safety regulations for machines, the EMC regulations and the general regulations for human protection.

Frequencies > 60 Hz

For operating the motors and drives with frequencies higher than 60 Hz check all used components whether they are also qualified.

You should ask the manufacturer of the motor and the machine on principle. Typically, 4- to 8-pole motors are qualified for operation up to 100 Hz.

Overvoltage protective circuit

All inductivities like relays, contactors, magnetic brakes, etc. have to be equipped with an overvoltage protective circuit. It prevents malfunctions of the conventional device control as well as of the fieldbus.

A free-wheeling diode is provided for DC control circuits.

For AC control circuits the R/C wiring is preferable compared to a wiring with varistors because as a result not only the peak overvoltage is reduced but also the rise-time.

The protective circuit must be qualified for inverter operation !

Earth leakage circuit breaker

Frequency inverters, especially those with additional EMC filters and screened motor cables, lead an increased leakage current against earth.

The leakage current depends on:

- the length of the motor cable
- the type of laying and whether the motor cable is screened or not
- the set pulse frequency
- the use of an additional EMC filter
- the grounding of the motor at its installation place (grounded or non-grounded))

Particularly because of the capacitors of the filter, an unintentional triggering of an earth leakage circuit breaker may occur at the moment of switching on. As well, the earth capacitances may cause an incorrect triggering during operation.

On the other hand, it is possible that the triggering is blocked by means of DC components which are caused by the mains rectification at the input of the inverter.

Therefrom, you should observe following:

- Only use short-time delayed and pulse current sensitive earth leakage circuit breakers with considerably higher tripping current.
- Protect the other loads by means of a separate earth leakage circuit breaker.
- Earth leakage circuit breakers in front of an inverter do not provide absolutely reliable protection in case of direct contact !! So they should be always used in combination with other protective measures.
- The frequency inverters have no current-limiting effect (in case of earth leakage currents) and therefore they do not violate the protective multiple earthing.

Depending on the conditions, the leakage current of plants with high cable lengths can be absolutely higher than 100 mA !!

The built-in earth leakage detection has no current-limiting effect. It only protects the drive and is no human protection.

Automatic restarting

The internal function "automatic restart" switches the inverter automatically on after each mains switch-on or mains recurrence without the power failure having to be confirmed. This is an important and valuable function for the increase in availability, especially for drives that are not integrated into the plant control via a fieldbus system.

The automatic restart takes place in case of:

- Switch-on of the line supply voltage (only in case of 2-wire control and dependent on the selected undervoltage behaviour)
- after a mains failure (only in case of 2-wire control and dependent on the selected undervoltage behaviour)
- completion of the standby-mode
- after each trip confirmation (only in case of 2-wire control – level rated)
- after a fast stop or emergency stop (only in case of 2-wire control – level rated)

Locking of the frequency inverter

The ATV61 devices include the standard protective function "Safe Standstill" ("Power Removal") which prevents any unintended start-up of the motor. This function fulfills, when correctly wired, the machine standard EN 954-1 / ISO 13849-1 safety category 3, the IEC/EN 61508 SIL2 standard for functional safety and the power drive system standard IEC/EN 61800-5-2.

Connecting and disconnecting the motor

Alternatively to the use of the control terminal PWR "Safe Standstill" a safety switch or a motor contactor can be installed to connect and disconnect the motor. Because the inverter recognizes the respective switching state, there is no risk of demolition or fault switch-off.

After connection the motor restarts by means of the function "Catch on the fly".

Description

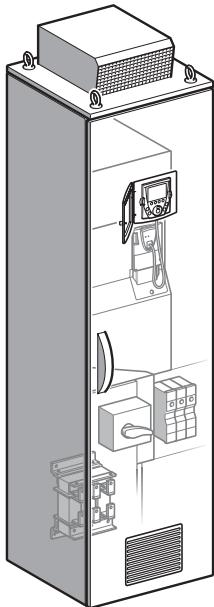

Altivar 61 Plus

ATV61ES5●●●N4

"Simplified version"

Inverters in standard enclosures for 400 V networks

The basic equipment contains:

- Frequency inverter ATV61 with integrated EMC filter
- Mains connection on circuit breaker
- Circuit breaker (without door handle)
- DC choke
- LCD operating panel (mounted into the enclosure door)
- Terminals/bars for motor connection
- Protection degree IP54 with separated air flow:
air flow through the plinth of the enclosure and mounted air guidance hood. Cooling of the control part by means of filter fans in the enclosure door.
- Max. inflow coolant temperature 0...40°C
- Enclosure Sarel S6000, color RAL 7032
- Multilingual operating instructions
- Documentation-CD-ROM with parameterization instructions, fieldbus instructions, operating and parameterizing software,...
- Enclosure layout plans consisting of circuit diagram, terminal connection table, list of materials and design drawing

Description

Altivar 61 Plus

ATV61ES5●●●N4

"Simplified version"

General technical data	
Input	
Voltage	400 (380, 415) V $\pm 10\%$ for TT, TN-C, TN-S or IT networks *)
Frequency	50 / 60 Hz $\pm 5\% *$
Overvoltage class	Class III according to EN 50178
*) Technical data and remarks for mains voltages are given in chapter "Mains conditions", page 21.	
Output	
Control method	Vector-oriented flux control without feedback, V/f characteristic, energy saving system
Voltage	3 AC 0...100% mains voltage, dynamic voltage stabilization
Overload	20 % for 60 seconds per 10 minutes, 35 % for 2 seconds
Pulse frequency	2.5 kHz, adjustable from 2...8 kHz
Frequency / Base frequency	0.1...500 Hz / 25...500 Hz, adjustable
Short circuit protection	All-pole protected against short circuit and earth fault by means of overcurrent switch-off
Design	Floor-standing enclosure
Cooling	forced
Frequency resolution, digital	0.01 Hz / 50 Hz, frequency stability: $\pm 0.01\% / 50\text{ Hz}$
Speed accuracy	V/f mode: slip frequency VC without feedback 0.3 x slip frequency
Mechanical strength	
Mechanical vibration	According to IEC/EN 60068-2-6 1.5 mm at 3...10 Hz, 0.6 g at 10...200 Hz (3M3 according to IEC/EN 60721-3-3)
Shock	According to IEC/EN 60068-2-27 4 g for 11 ms (3M2 according to IEC/EN 60721-3-3)
Ambient conditions	
Operating temperature	0...+40°C (-10...+40°C with enclosure heating) 3K3 according to IEC/EN 60721-3-3 up to +50°C with derating
Storage / Transport temperature	-25...+70°C
Protection degree	IP54 with separated air flow
Environmental class / Humidity	Class 3K3 in accordance with IEC/EN 60721-3-3 / no condensation, max. 95 % relative humidity
Altitude	Up to 1000 m, beyond power decrease of 1 % per 100 m up to 3000 m
Allowed pollution	Pollution degree: pollution degree 3 according to EN 61800-5-1 Chemical / mechanical classification: 3C2 and 3S2 according to EN 60721-3-3
Protection class	Class 1 according to EN 50178
Standards	
Basic standard	The devices are designed, built and tested on the basis of EN 50178.
EMC immunity	According to EN 61800-3, 1st and 2nd environment (IEC 1000-4-2; IEC 1000-4-3; IEC 1000-4-4; IEC 1000-4-5; IEC 1000-4-6)
EMC emission	In accordance with product standard EN 61800-3, 2nd environment, category C3
Insulation	Galvanic insulation in accordance with EN 50178 PELV (Protective Extra Low Voltage)
Standards	CE

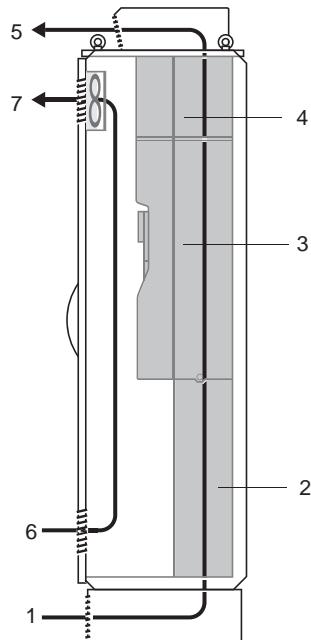

Frequency inverters are a product of the restricted sales according to IEC 61800-3. In a residential environment this product can cause radio frequency interferences whereupon the user can be called on to take suitable measures.

Protection degree

The standard design of the ATV61ES5●●●N4 enclosure units corresponds with protection degree IP54 with separated air flow. This solution contains a clearly specified and tested cooling system which provides highest operating safety.

ATV61ES5 - Enclosure design IP54 with separated air flow

In case of protection degree IP54 with separate air channel the cooling air inlet for the power part takes place through the plinth and the air outlet through the enclosure roof. The control part is cooled by filter fans in the enclosure door.

- 1 Cooling air for power part (via enclosure plinth)
- 2 Air guidance channel
- 3 Frequency inverter ATV61
- 4 DC choke
- 5 Air outlet through metal grid with splash water protection
- 6 Air inlet (with filter mat) for control part
- 7 Air outlet (with filter fan) for control part

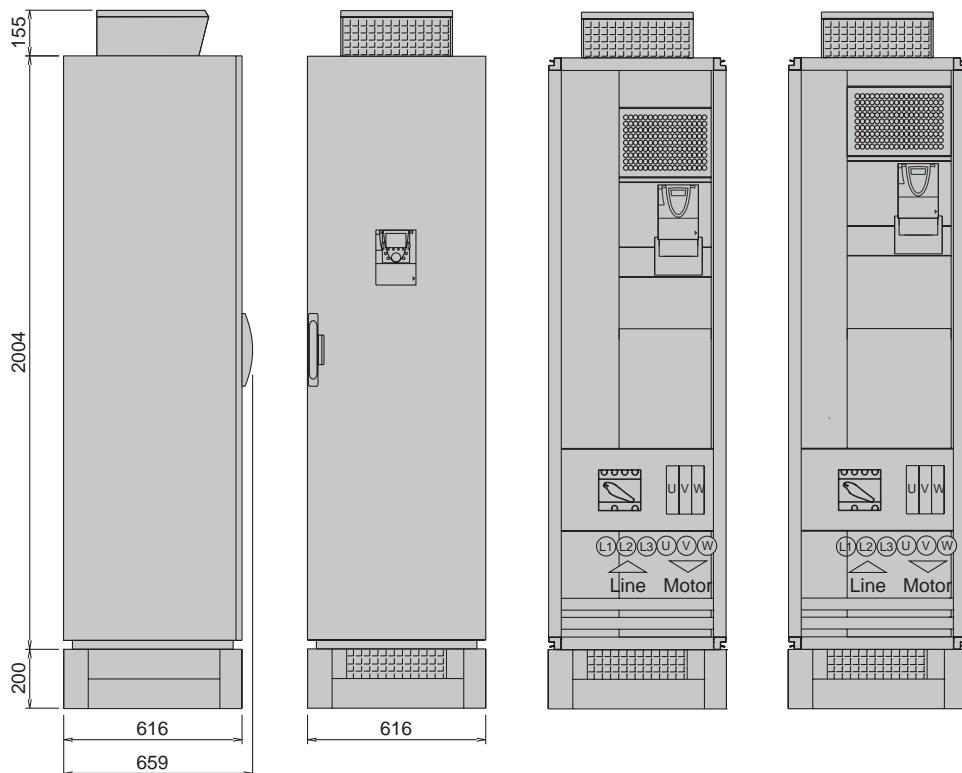

Protection degree: IP54

Air inlet temperature: 0...+40°C

Power decrease

Depending on the chosen pulse frequency and the maximum ambient temperature a power increase is possible or a power reduction is necessary. This can be determined by means of the following diagrams.

ATV 61ES5D90N4 ... ES563N4

Please observe the following guidelines to guarantee trouble-free operation of the drive:

- At higher pulse frequencies the allowed motor cable length is reduced (see chapter "Motor cable lengths").
- Select a motor that is at most one type bigger.

If the heat sink temperature is too high, the pulse frequency is automatically reduced to prevent an overload of the inverter.

Fuses and cable cross sections

The Altivar enclosure designs have input fuses built-in as standard. These fuses are for the case that the electronic protective mechanism of the inverter fails. So they are a secondary protection of the inverter to protect the power cables against overload and to protect the input rectifier against an internal short-circuit.

The below-mentioned diameters for 3-wire cables are recommended values for laying the cable in air at max. 40°C ambient temperature, based on the regulations ÖVN EN 1 and VDE 0100.

The lines in the enclosure are dimensioned according to the specification for single conductors XLPE/EPR copper 90°C.

The motor cables are dimensioned for the maximum continuous current. They apply to 0...100 Hz (up to 300 Hz the cable losses increase about 25 % because of the Skin-effect).

In case of other ambient conditions and different regulations the cable diameters must be adjusted.

If the mains fuses blow the inverter already has a primary defect. Therefore, replacing the blown fuses and switching the inverter on again is not effective. Consequently, the use of circuit breakers is not advantageous and has additionally the disadvantage of a slower switch-off.

A low cost alternative to screened motor cables is the use of NYCY or NYCWY cables (power cables with concentric protective conductor).

The dimensioning of the pre-fuses, mains cable cross sections and mains cable length has to be done taking into account the available mains short circuit current to ensure a safe switch-off in case of a fault!

If required increase the power of the transformer to reach the necessary short circuit capability.

Cable cross sections

		Mains supply				Motor output			Recommended cable [mm ²]

1) Connection only with special cable lugs for switching devices possible

Differing cable cross sections on request.

Motor cable lengths

Because of the permitted mains disturbances, the allowed overvoltages at the motor, the occurring bearing currents and the permitted losses the distance between inverter and motor(s) is limited. The maximum distance heavily depends on the type of motor cable (screened/unscreened) as well as from the used options.

Overvoltages at the motor

Overvoltages at the motor terminals result from reflection in the motor cable. Basically the motors are stressed with measurable higher voltage peaks from a motor cable length of 50 m. Thereby the motor load is nearly independent from the used inverter !

Line supply voltage 400 V Motor insulation for 1300 V phase-to-phase peak voltage and dv/dt resistance > 8 kV/μs

Line supply voltage 460 V Motor insulation for 1600 V phase-to-phase peak voltage and dv/dt resistance > 8 kV/μs

In order to use standard motors in this voltage range, the Altivar frequency inverters have a function to inhibit short output voltage pulses. With this function the reflection conditional overvoltages are attenuated. The slew rate as well as the EMC load are not influenced by changing this parameter.

At even longer motor cables the use of a "dv/dt filter" is required. Combined with the cable capacitance the option motor choke affects like a filter and limits the voltage peaks at the motor as well as the slew rate of the output pulses.

When the specified motor cable lengths are observed the motor life time can be significantly extended.

Line supply voltage 400 V max. 1000 V phase-to-phase peak voltage and dv/dt < 500 V/μs

Line supply voltage 460 V max. 1150 V phase-to-phase peak voltage and dv/dt < 500 V/μs

Observing the specified length of motor cables is absolutely necessary to protect the motor !

EMC interferences

The mains rectifier as well as the IGBT inverter cause high-frequent interferences which drain off more and more stronger to the earth potential with increasing motor cable length. As a result the line-conducted interferences to the mains increase. The attenuation of the line reactors is not longer sufficient and the permitted interference limits are exceeded.

Observing the specified length of motor cables is also necessary for compliance with the EMC limits !

Bearing currents

Common mode bearing currents which even cannot be prevented by means of motors equipped with an insulated bearing are significantly reduced by use of the option motor choke.

Especially in case of big motors with middle up to high motor cable lengths the option motor choke is considerable to increase the availability of the motor.

Multiplication factors

 The specified lengths of motor cables are recommended limits based on typical motor cables, laying in cable channels, default pulse frequency and maximal output frequency of 100 Hz.

In case of different conditions the recommended cable lengths must be converted by means of the following factors.

If several factors apply, please multiply them.

- The pulse frequency does not correspond to factory default:

at 4 kHz	multiply all values by 0.7
at 8 kHz	multiply all values by 0.4

- In case of output frequencies higher than 100 Hz:

up to 200 Hz	multiply all values by 0.8
up to 300 Hz	multiply all values by 0.5

- Instead of two parallel cables one thicker cable is used:

multiply all values by 1.5

- In case of 6-pole motor cabling (e.g. for star/delta starting circuit):

multiply all values by 0.75

- In case of parallel motors with their centre near the inverter values must be converted in compliance with the number of motors. When an adjusted motor choke is used for each motor, the following values in brackets apply.

at 2 motors	multiply all values by 0.40 (0.80)
at 3 motors	multiply all values by 0.25 (0.60)
at 4 motors	multiply all values by 0.15 (0.40)
at 5 motors	multiply all values by 0.10 (0.25)

- If the centre of the parallel motors is near the motors, following factors for conversion apply:

at 2 motors	multiply all values by 0.80
at 3 motors	multiply all values by 0.60
at 4 motors	multiply all values by 0.40
at 5 motors	multiply all values by 0.25

Recommended maximum lengths of motor cables in 2nd environment (industrial environment)**C3 (EN 55011 - class A group 2)**

no option *)	50 m	screened cable
with motor choke	80 m	screened cable

C4 (EMC concept)

no option *)	100 m	screened cable
with motor choke	300 m	screened cable
no option *)	150 m	unscreened cable
with motor choke	300 m	unscreened cable

*) By means of a software function to inhibit short output voltage pulses the overvoltage at the motor terminals is limited to the double DC voltage. Before you can use this function you have to ensure that the motor is suitable!

Connection

Altivar 61 Plus

ATV61ES5●●●N4

"Simplified version"

Description

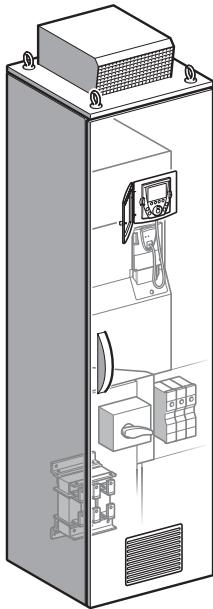

Altivar 61 Plus

ATV61EX••••N4

Line supply voltage 400 V

Inverters in standard enclosures for 400 V networks

The basic equipment contains:

- Frequency inverter ATV61 with integrated EMC filter
- Mains connection on main switch
- Main switch (without door handle)
- Superfast semiconductor fuses for inverter protection
- Line reactor (DC choke for ATV61EXS5•••N4)
For ATV61EXA•••N4 the line reactor is available as option.
- Control transformer for 230 V to supply the cooling system as well as optional components (only at ATV61EXA•••N4)
- LCD operating panel (mounted into the enclosure door)
- Terminals/bars for motor connection
- Protection degree IP23:
air inlet through the enclosure door, air outlet through the enclosure roof.
At higher power the power part is cooled by an internal cooling circuit, the control part is cooled by fans in the enclosure door. Air flow through grid in the enclosure door.
- Protection degree IP54:
air inlet through the enclosure door, air outlet through fan on the top.
At higher power the power part is cooled by an internal cooling circuit, the control part is cooled by fans in the enclosure door. Air flow through grid with filter in the enclosure door.
- Protection degree IP54 with separated air flow:
air flow through the plinth of the enclosure and mounted air guidance hood. Cooling of the control part by means of filter fans in the enclosure door.
- Max. inflow coolant temperature 0...40°C
- Enclosure Sarel S6000, color RAL 7032
- Multilingual operating instructions
- Documentation-CD-ROM with parameterization instructions, fieldbus instructions, operating and parameterizing software,...
- Enclosure layout plans consisting of circuit diagram, terminal connection table, list of materials and design drawing

Description

Altivar 61 Plus

ATV61EX••••N4

Line supply voltage 400 V

General technical data	
Input	
Voltage	400 (380, 415) V $\pm 10\%$ for TT, TN-C, TN-S or IT networks *)
Frequency	50 / 60 Hz $\pm 5\%$ *)
Overvoltage class	Class III according to EN 50178
*) Technical data and remarks for mains voltages are given in chapter "Mains conditions", page 21.	
Output	
Control method	Vector-oriented flux control without feedback, V/f characteristic, energy saving system
Voltage	3 AC 0...100% mains voltage, dynamic voltage stabilization
Overload	20 % for 60 seconds per 10 minutes, 35 % for 2 seconds
Pulse frequency	2.5 kHz, adjustable from 2...8 kHz (at ATV61EXA••••N4 max. 4.9 kHz)
Frequency / Base frequency	0.1...500 Hz / 25...500 Hz, adjustable
Short circuit protection	All-pole protected against short circuit and earth fault by means of overcurrent switch-off
Design	Floor-standing enclosure
Cooling	forced
Frequency resolution, digital	0.01 Hz / 50 Hz, frequency stability: $\pm 0.01\% / 50\text{ Hz}$
Speed accuracy	V/f mode: slip frequency VC without feedback 0.3 x slip frequency
Mechanical strength	
Mechanical vibration	According to IEC/EN 60068-2-6 1.5 mm at 3...10 Hz, 0.6 g at 10...200 Hz (3M3 according to IEC/EN 60721-3-3)
Shock	According to IEC/EN 60068-2-27 4 g for 11 ms (3M2 according to IEC/EN 60721-3-3)
Ambient conditions	
Operating temperature	0...+40°C (-10...+40°C with enclosure heating) 3K3 according to IEC/EN 60721-3-3 up to +50°C with derating
Storage / Transport temperature	-25...+70°C
Protection degree	selective: ATV61EXC2••••N4 ... IP23 ATV61EXC5••••N4 ... IP54 with air intake through filter mats ATV61EXS5••••N4 ... IP54 with separated air flow ATV61EXA2••••N4 ... IP23 with internal cooling circuit ATV61EXA5••••N4 ... IP54 with internal cooling circuit
Environmental class / Humidity	Class 3K3 in accordance with IEC/EN 60721-3-3 / no condensation, max. 95 % relative humidity
Altitude	Up to 1000 m, beyond power decrease of 1 % per 100 m up to 3000 m
Allowed pollution	Pollution degree: for IP23 design: pollution degree 2 according to EN 61800-5-1 for IP54 design: pollution degree 3 according to EN 61800-5-1 Chemical / mechanical classification: 3C2 and 3S2 according to EN 60721-3-3
Protection class	Class 1 according to EN 50178
Standards	
Basic standard	The devices are designed, built and tested on the basis of EN 50178.
EMC immunity	According to EN 61800-3, 1st and 2nd environment (IEC 1000-4-2; IEC 1000-4-3; IEC 1000-4-4; IEC 1000-4-5; IEC 1000-4-6)
EMC emission	In accordance with product standard EN 61800-3, 2nd environment, category C3
Insulation	Galvanic insulation in accordance with EN 50178 PELV (Protective Extra Low Voltage)
Standards	CE

Frequency inverters are a product of the restricted sales according to IEC 61800-3. In a residential environment this product can cause radio frequency interferences whereupon the user can be called on to take suitable measures.

Protection degree ATV61EXC• and ATV61EXS5

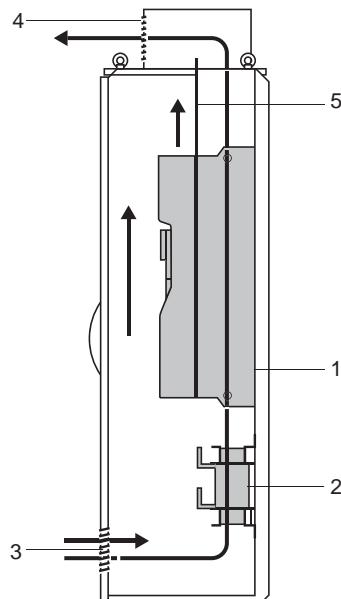

In order to adapt the utmost robust Altivar product line with enclosure design optimal to the individual requests of the system, these enclosure units are available in three different designs. Each solution contains a clearly specified and tested cooling system which provides highest operating safety.

The standard design of the ATV61 enclosure units complies with protection degree IP23. If a higher protection degree is desired or required, there are two IP54 solutions available.

- IP54 with filter mats
- IP54 with separated air flow

Overview of standardised protection degrees

ATV61EXC2 - Standard enclosure design IP23

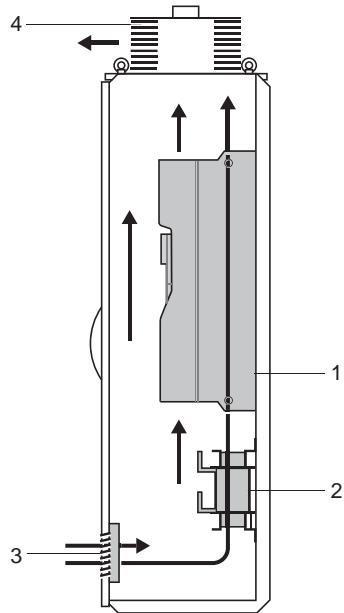

In this case the input of the cooling air takes place by the enclosure door and the output through the top of the enclosure. The air flow must not be constrained by means of fixtures or filter mats.

- 1 Frequency inverter ATV61
- 2 Line reactor
- 3 Air inlet grid (without filter mat) for control part and power part
- 4 Metal cover with splash water protection
- 5 Guided air flow to avoid internal air short-cuts

Protection degree: IP23

Air inlet temperature: 0...+40°C (-10...+40°C with enclosure heating)

ATV61EXC5 - Enclosure design IP54

At protection degree IP54 with filter mats the input of the cooling air takes place through the filter mats in the enclosure door and the output through the fan at the top of the enclosure.

1 Frequency inverter ATV61

2 Line reactor

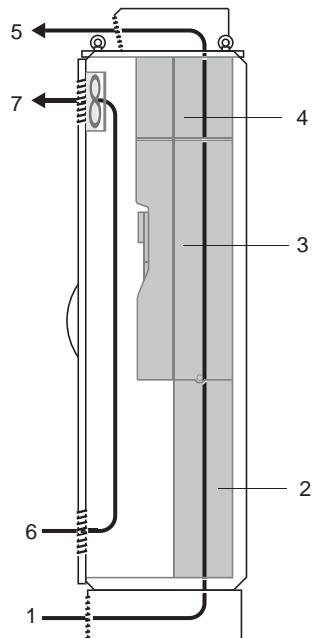

3 Air inlet grid (with filter mat)

4 Fan (with filter mat)

Protection degree: IP54

Air inlet temperature: 0...+40°C (-10...+40°C with enclosure heating)

ATV61EXS5 - Enclosure design IP54 with separated air flow

1 Cooling air for power part (via enclosure plinth)

2 Air guidance channel

3 Frequency inverter ATV61

4 DC choke
(at ATV61EXS5●●●N and ATV61EXS5●●●Y instead of the DC choke a line reactor is delivered in a separate supply field)

5 Air outlet through metal grid with splash water protection

6 Air inlet (with filter mat) for control part

7 Air outlet (with filter fan) for control part

Protection degree: IP54

Air inlet temperature: 0...+40°C (-10...+40°C with enclosure heating)

Protection degree ATV61EXA•

Overview of available protection degrees

ATV61EXA2 - Enclosure design IP23 with internal cooling circuit

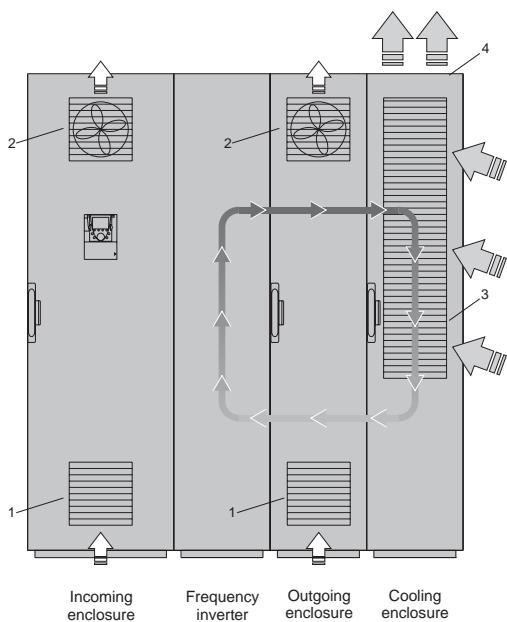

In case of this enclosure design the cooling of the power part takes place in an own enclosure. Here the cooling air is sucked in by the fans in the enclosure door and the air outlet takes place through the enclosure roof. The control part is cooled by fans in the enclosure door.

- 1 Air inlet grid
- 2 Air outlet with fans
- 3 Air inlet grid with fans for power part
- 4 Air outlet grid for power part

Protection degree: IP23

Air inlet temperature: 0...+40°C
(-10...+40°C with enclosure heating)

ATV61EXA5 - Enclosure design IP54 with internal cooling circuit

In case of this enclosure design the cooling of the power part takes place in an own enclosure. Here the cooling air is sucked in by the fans in the enclosure door and the air outlet takes place through the enclosure roof. The control part is cooled by filter fans in the enclosure door.

- 1 Air inlet grid with filter mats
- 2 Air outlet with filter fans
- 3 Air inlet grid with fans for power part
- 4 Air outlet grid for power part

Protection degree: IP54

Air inlet temperature: 0...+40°C
(-10...+40°C with enclosure heating)

Power decrease

Depending on the chosen pulse frequency and the maximum ambient temperature a power increase is possible or a power reduction is necessary. This can be determined by means of the following diagrams.

ATV 61EX●●D90N4 ... EX●●63N4

ATV 61EXA●C63N4 ... EXA●M14N4

Please observe the following guidelines to guarantee trouble-free operation of the drive:

- At higher pulse frequencies the allowed motor cable length is reduced (see chapter "Motor cable lengths").
- Select a motor that is at most one type bigger.

If the heat sink temperature is too high, the pulse frequency is automatically reduced to prevent an overload of the inverter.

Fuses and cable cross sections

The Altivar enclosure designs have input fuses built-in as standard. These fuses are for the case that the electronic protective mechanism of the inverter fails. So they are a secondary protection of the inverter to protect the power cables against overload and to protect the input rectifier against an internal short-circuit.

The below-mentioned diameters for 3-wire cables are recommended values for laying the cable in air at max. 40°C ambient temperature, based on the regulations ÖVN EN 1 and VDE 0100.

The lines in the enclosure are dimensioned according to the specification for single conductors XLPE/EPR copper 90°C.

The motor cables are dimensioned for the maximum continuous current. They apply to 0...100 Hz (up to 300 Hz the cable losses increase about 25 % because of the Skin-effect).

In case of other ambient conditions and different regulations the cable diameters must be adjusted.

If the mains fuses blow the inverter already has a primary defect. Therefore, exchanging the blown fuses and switching the inverter on again is not effective. Consequently, the use of circuit breakers is not advantageous and has additionally the disadvantage of a slower switch-off.

A low cost alternative to screened motor cables is the use of NYCY or NYCWY cables (power cables with concentric protective conductor).

The dimensioning of the pre-fuses, mains cable cross sections and mains cable length has to be done taking into account the available mains short circuit current to ensure a safe switch-off in case of a fault!

If required increase the power of the transformer to reach the necessary short circuit capability.

Cable cross sections at standard design									
		Mains supply			Motor output				
		No. of phases	Pre-fuse (per phase)	Recommended cable [mm ²]	Max. cable [mm ²] (per phase)	Internal fuse (per phase)	Max. cable (without motor choke) [mm ²] (per phase)	Max. cable (with motor choke) [mm ²] (per phase)

1)at IP54 with separated air flow (ATV61EXS5●●●N4)

2)Connection only with special cable lugs for switching devices possible

Differing cable cross sections on request.

Motor cable lengths

Because of the permitted mains disturbances, the allowed overvoltages at the motor, the occurring bearing currents and the permitted losses the distance between inverter and motor(s) is limited. The maximum distance heavily depends on the type of motor cable (screened/unscreened) as well as from the used options.

Overvoltages at the motor

Overvoltages at the motor terminals result from reflection in the motor cable. Basically the motors are stressed with measurable higher voltage peaks from a motor cable length of 50 m. Thereby the motor load is nearly independent from the used inverter !

Line supply voltage 400 V Motor insulation for 1300 V phase-to-phase peak voltage and dv/dt resistance > 8 kV/μs

Line supply voltage 460 V Motor insulation for 1600 V phase-to-phase peak voltage and dv/dt resistance > 8 kV/μs

In order to use standard motors in this voltage range, the Altivar frequency inverters have a function to inhibit short output voltage pulses. With this function the reflection conditional overvoltages are attenuated. The slew rate as well as the EMC load are not influenced by changing this parameter.

At even longer motor cables the use of a "dv/dt filter" is required. Combined with the cable capacitance the option motor choke affects like a filter and limits the voltage peaks at the motor as well as the slew rate of the output pulses.

When the specified motor cable lengths are observed the motor life time can be significantly extended.

Line supply voltage 400 V max. 1000 V phase-to-phase peak voltage and dv/dt < 500 V/μs

Line supply voltage 460 V max. 1150 V phase-to-phase peak voltage and dv/dt < 500 V/μs

Observing the specified length of motor cables is absolutely necessary to protect the motor !

EMC interferences

The mains rectifier as well as the IGBT inverter cause high-frequent interferences which drain off more and more stronger to the earth potential with increasing motor cable length. As a result the line-conducted interferences to the mains increase. The attenuation of the line reactors is not longer sufficient and the permitted interference limits are exceeded.

Observing the specified length of motor cables is also necessary for compliance with the EMC limits !

Bearing currents

Common mode bearing currents which even cannot be prevented by means of motors equipped with an insulated bearing are significantly reduced by use of the option motor choke.

Especially in case of big motors with middle up to high motor cable lengths the option motor choke is considerable to increase the availability of the motor.

Multiplication factors

 The specified lengths of motor cables are recommended limits based on typical motor cables, laying in cable channels, default pulse frequency and maximal output frequency of 100 Hz.

In case of different conditions the recommended cable lengths must be converted by means of the following factors.

If several factors apply, please multiply them.

- The pulse frequency does not correspond to factory default:

at 4 kHz	multiply all values by 0.7
at 8 kHz	multiply all values by 0.4

- In case of output frequencies higher than 100 Hz:

up to 200 Hz	multiply all values by 0.8
up to 300 Hz	multiply all values by 0.5

- Instead of two parallel cables one thicker cable is used:

multiply all values by 1.5

- In case of 6-pole motor cabling (e.g. for star/delta starting circuit): multiply all values by 0.75

- In case of parallel motors with their centre near the inverter values must be converted in compliance with the number of motors. When an adjusted motor choke is used for each motor, the following values in brackets apply.

at 2 motors	multiply all values by 0.40 (0.80)
at 3 motors	multiply all values by 0.25 (0.60)
at 4 motors	multiply all values by 0.15 (0.40)
at 5 motors	multiply all values by 0.10 (0.25)

- If the centre of the parallel motors is near the motors, following factors for conversion apply:

at 2 motors	multiply all values by 0.80
at 3 motors	multiply all values by 0.60
at 4 motors	multiply all values by 0.40
at 5 motors	multiply all values by 0.25

Recommended maximum lengths of motor cables in 2nd environment (industrial environment)**C3 (EN 55011 - class A group 2)**

no option *)	50 m	screened cable
with motor choke	80 m	screened cable

C4 (EMC concept)

no option *)	100 m	screened cable
with motor choke	300 m	screened cable
no option *)	150 m	unscreened cable
with motor choke	300 m	unscreened cable

*) By means of a software function to inhibit short output voltage pulses the overvoltage at the motor terminals is limited to the double DC voltage. Before you can use this function you have to ensure that the motor is suitable!

Available options

To enlarge the field of applications, various options are available concerning control and operation, extensions referring to the electric arrangement and to increase the protection degree.

General enclosure options					
Allocation table for options					
Option	Brief description	Order number	Weight [kg]	Reference	
Inputs/outputs					
Basic I/O extension card	Terminal extension for additional digital inputs and outputs	VW3 A3E 201	0.320	See product catalogue	
Extended I/O extension card	Terminal extension for additional analog and digital inputs and outputs	VW3 A3E 202	0.300	See product catalogue	
Control terminals X12	Control terminals for the basic inverter	VW3 AE 1201	0.700	Page 145	
Control terminals X12, X13	Control terminals for the basic device and the I/O option cards VW3 A3E 201 and 202.	VW3 AE 1202	0.900	Page 145	
Adapter for 115 V logic inputs	Enables the use of 115 V logic signals.	VW3 A3E 101	0.200	See product catalogue	
Relay output OC	Relay for digital output (Open collector)	VW3 AE 2201	0.100	Page 146	
Multi-pump card	Allows the adaptation to pump applications.	VW3 A3E 502	0.320	See product catalogue	
Extended multi-pump card	This card supports all multi-pump applications.	VW3 A3E 503	0.320	See product catalogue	
"Controller inside" card	Programmable card for integration of control system functions.	VW3 A3E 501	0.300	See product catalogue	
Additional electrical input isolation	Isolated amplifier with optoelectronic potential separation connected to the analog input of the inverter	VW3 AE 1901	0.100	Page 147	
Isolated amplifier (output)	Isolated amplifier with optoelectronic potential separation connected to the analog output of the inverter	VW3 AE 1902	0.100	Page 148	
Encoder feedback					
Encoder interface card 5 V / RS422	Extension card for encoder feedback. Supply voltage 5 V / RS422	VW3 A3E 401	0.200		
Encoder interface card 12 V OC	Extension card for encoder feedback. Supply voltage 12 V / open collector output	VW3 A3E 403	0.200		
Encoder interface card 15 V OC	Extension card for encoder feedback. Supply voltage 15 V / open collector output	VW3 A3E 404	0.200		
Encoder interface card 12 V (push-pull)	Extension card for encoder feedback. Supply voltage 12 V / push-pull	VW3 A3E 405	0.200		
Encoder interface card 15 V (push-pull)	Extension card for encoder feedback. Supply voltage 15 V / push-pull	VW3 A3E 406	0.200		
Encoder interface card 24 V (push-pull)	Extension card for encoder feedback. Supply voltage 24 V / push-pull	VW3 A3E 407	0.200		
Fieldbuses (buildings)					
LonWorks communication card	Option card for control of the inverter via LonWorks.	VW3 A3E 312	0.300		
METASYS N2 communication card	Option card for control of the inverter via METASYS N2.	VW3 A3E 313	0.300		
APOGEE FLN communication card	Option card for control of the inverter via APOGEE FLN.	VW3 A3E 314	0.300		
BACnet communication card	Option card for control of the inverter via BACnet.	VW3 A3E 315	0.300

Key switch (Local / Remote)	Key switch in the enclosure door for switching between terminals/bus and local operation	VW3 AE 1801	0.200	Page 159	
Motor heating	Includes a circuit breaker, a contactor and the terminals to connect a motor heating	VW3 AE 2101	0.200	Page 158	
External Motor fan	Includes a circuit breaker, a contactor and the terminals to connect an external motor fan	VW3 AE 2102	0.200	Page 159	
Voltmeter 400 V	Measuring instrument built-in in the enclosure door, which indicates the line voltage.	VW3 AE 2301	0.400	Page 159	
Voltmeter 500 V	Measuring instrument built-in in the enclosure door, which indicates the line voltage.	VW3 AE 2302	0.400	Page 159	
Voltmeter 690 V	Measuring instrument built-in in the enclosure door, which indicates the line voltage.	VW3 AE 2303	0.400	Page 159	

See product catalogue

Enclosure options depending on the power

Option	Brief description	Reference
Braking unit	Limits the DC-voltage at generator operation	Page 161
Door handle for main switch	Enables handling without opening the enclosure door	Page 162
Circuit breaker	Provides a safe switching-off at overload	Page 163
Door handle for circuit breaker	Enables handling without opening the enclosure door	Page 162
Undervoltage coil 230 V	When there is no voltage at the undervoltage coil, the circuit breaker switches off.	Page 164
Undervoltage coil 110 V	When there is no voltage at the undervoltage coil, the circuit breaker switches off.	Page 165
230 V motor for circuit breaker	Remote control of the circuit breaker via control commands is possible by means of this motor drive.	Page 165
110 V motor for circuit breaker	Remote control of the circuit breaker via control commands is possible by means of this motor drive.	Page 166
Line contactor	Used for the function "line contactor control" to disconnect the drive from the mains	Page 167
12-pulse supply	Contains the components for 12-pulse supply	Page 168
Control transformer	Control transformer 400 V / 230 V	Page 156
Ammeter	Measuring instrument built-in in the enclosure door, which indicates the line current.	Page 169
Enclosure heating	Heats the enclosure to avoid frost and condensation up to an ambient temperature of -10°C	Page 170
Motor choke	Reduces the slew rate on the output of the inverter to protect the motor	Page 171
Sinus filter	Permits nearly sinusoidal motor voltage	Page 172
Cable entry via the top	Allows connection of the line and the motor cables from above	Page 173
Enclosure plinth	200 mm plinth	Page 174
Plinth grill fine	Grill for the front side of the plinth of the enclosure	Page 176
Air condition	Cools the power losses of the control part to avoid filter mats in the enclosure door	Page 176

Description

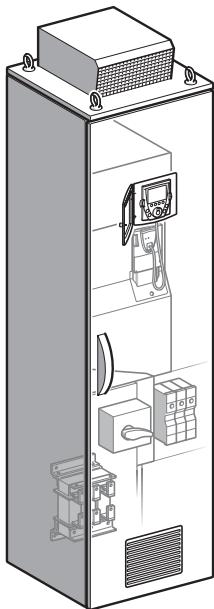

Altivar 61 Plus

ATV61EX••••N

Line supply voltage 500 V

Inverters in standard enclosures for 500 V networks

The basic equipment contains:

- Frequency inverter ATV61 with integrated EMC filter
- Mains connection on main switch
- Main switch (without door handle)
- Superfast semiconductor fuses for inverter protection
- Line reactor
For ATV61EXA•••N the line reactor is available as option.
- LCD operating panel (mounted into the enclosure door)
- Terminals/bars for motor connection
- Control transformer for 400 V and 230 V to supply the cooling system as well as optional components.
- Protection degree IP23:
air inlet through the enclosure door, air outlet through the enclosure roof.
At higher power the power part is cooled by an internal cooling circuit, the control part is cooled by fans in the enclosure door. Air flow through grid in the enclosure door.
- Protection degree IP54:
air inlet through the enclosure door, air outlet through fan on the top.
At higher power the power part is cooled by an internal cooling circuit, the control part is cooled by fans in the enclosure door. Air flow through grid with filter in the enclosure door.
- Protection degree IP54 with separated air flow:
air flow through the plinth of the enclosure and mounted air guidance hood. Cooling of the control part by means of filter fans in the enclosure door.
- Inflow coolant temperature 0...40°C
(up to 50°C with derating)
- Enclosure Sarel S6000, color RAL 7032
- Multilingual operating instructions
- Documentation-CD-ROM with parameterization instructions, fieldbus instructions, operating and parameterizing software,...
- Enclosure layout plans consisting of circuit diagram, terminal connection table, list of materials and design drawing

Description

Altivar 61 Plus

ATV61EX••••N

Line supply voltage 500 V

General technical data	
Input	
Voltage	500 (525) V ±10% for TT, TN-C, TN-S or IT networks *)
Frequency	50 / 60 Hz ±5 % *)
Oversupply class	Class III according to EN 50178
*) Technical data and remarks for mains voltages are given in chapter "Mains conditions", page 21.	
Output	
Control method	Vector-oriented flux control without feedback, V/f characteristic, energy saving system
Voltage	3 AC 0...100% mains voltage, dynamic voltage stabilization
Overload	20 % for 60 seconds per 10 minutes, 35 % for 2 seconds
Pulse frequency	2.5 kHz, adjustable from 2...4.9 kHz
Frequency / Base frequency	0.1...500 Hz / 25...500 Hz, adjustable
Short circuit protection	All-pole protected against short circuit and earth fault by means of overcurrent switch-off
Design	Floor-standing enclosure
Cooling	forced
Frequency resolution, digital	0.01 Hz / 50 Hz, frequency stability: ±0.01 % / 50 Hz
Speed accuracy	V/f mode: slip frequency VC without feedback 0.3 x slip frequency
Mechanical strength	
Mechanical vibration	According to IEC/EN 60068-2-6 1.5 mm at 3...10 Hz, 0.6 g at 10...200 Hz (3M3 according to IEC/EN 60721-3-3)
Shock	According to IEC/EN 60068-2-27 4 g for 11 ms (3M2 according to IEC/EN 60721-3-3)
Ambient conditions	
Operating temperature	0...+40°C (-10...+40°C with enclosure heating) 3K3 according to IEC/EN 60721-3-3 up to +50°C with derating
Storage / Transport temperature	-25...+70°C
Protection degree	selective: ATV61EXC2●●●N ... IP23 ATV61EXC5●●●N ... IP54 with air intake through filter mats ATV61EXS5●●●N ... IP54 with separated air flow ATV61EXA2●●●N ... IP23 with internal cooling circuit ATV61EXA5●●●N ... IP54 with internal cooling circuit
Environmental class / Humidity	Class 3K3 in accordance with IEC/EN 60721-3-3 / no condensation, max. 95 % relative humidity
Altitude	Up to 1000 m, beyond power decrease of 1 % per 100 m up to 3000 m
Allowed pollution	Pollution degree: for IP23 design: pollution degree 2 according to EN 61800-5-1 for IP54 design: pollution degree 3 according to EN 61800-5-1 Chemical / mechanical classification: 3C2 and 3S2 according to EN 60721-3-3
Protection class	Class 1 according to EN 50178
Standards	
Basic standard	The devices are designed, built and tested on the basis of EN 50178.
EMC immunity	According to EN 61800-3, 1st and 2nd environment (IEC 1000-4-2; IEC 1000-4-3; IEC 1000-4-4; IEC 1000-4-5; IEC 1000-4-6)
EMC emission	In accordance with product standard EN 61800-3, 2nd environment, category C3, at IT networks category C4
Insulation	Galvanic insulation in accordance with EN 50178 PELV (Protective Extra Low Voltage)
Standards	CE

Frequency inverters are a product of the restricted sales according to IEC 61800-3. In a residential environment this product can cause radio frequency interferences whereupon the user can be called on to take suitable measures.

Protection degree ATV61EXC• and ATV61EXS5

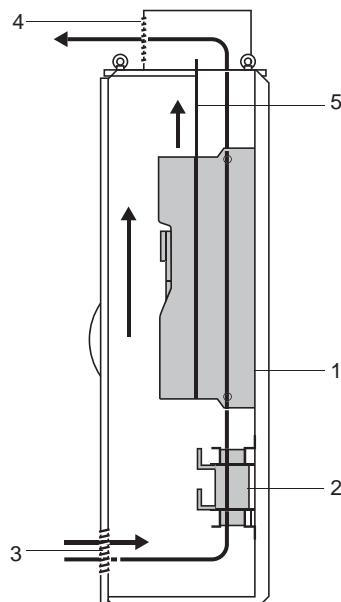

In order to adapt the utmost robust Altivar product line with enclosure design optimal to the individual requests of the system, these enclosure units are available in three different designs. Each solution contains a clearly specified and tested cooling system which provides highest operating safety.

The standard design of the ATV61 enclosure units complies with protection degree IP23. If a higher protection degree is desired or required, there are two IP54 solutions available.

- IP54 with filter mats
- IP54 with separated air flow

Overview of standardised protection degrees

ATV61EXC2 - Standard enclosure design IP23

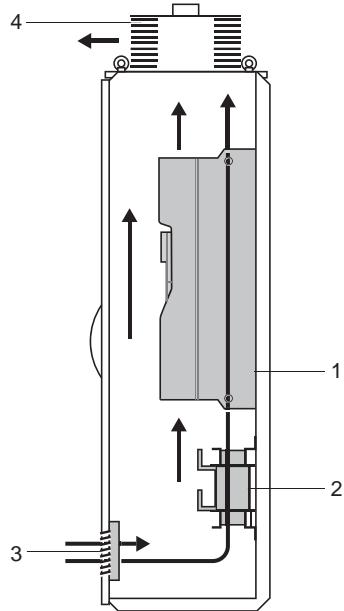

In this case the input of the cooling air takes place by the enclosure door and the output through the top of the enclosure. The air flow must not be constrained by means of fixtures or filter mats.

- 1 Frequency inverter ATV61
- 2 Line reactor
- 3 Air inlet grid (without filter mat) for control part and power part
- 4 Metal cover with splash water protection
- 5 Guided air flow to avoid internal air short-cuts

Protection degree: IP23

Air inlet temperature: 0...+40°C (-10...+40°C with enclosure heating)

ATV61EXC5 - Enclosure design IP54

At protection degree IP54 with filter mats the input of the cooling air takes place through the filter mats in the enclosure door and the output through the fan at the top of the enclosure.

1 Frequency inverter ATV61

2 Line reactor

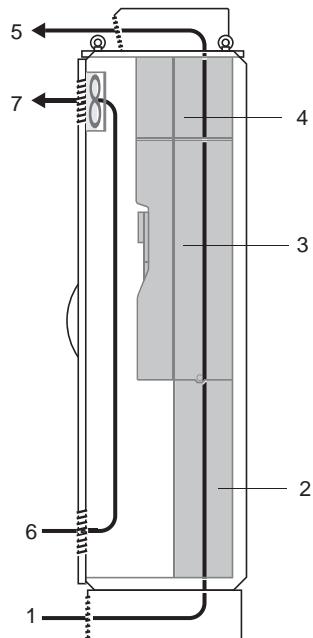

3 Air inlet grid (with filter mat)

4 Fan (with filter mat)

Protection degree: IP54

Air inlet temperature: 0...+40°C (-10...+40°C with enclosure heating)

ATV61EXS5 - Enclosure design IP54 with separated air flow

In case of protection degree IP54 with separate air channel the cooling air inlet for the power part takes place through the plinth and the air outlet through the enclosure roof. The control part is cooled by filter fans in the enclosure door or by an optional air condition.

1 Cooling air for power part (via enclosure plinth)

2 Air guidance channel

3 Frequency inverter ATV61

4 DC choke
(at ATV61EXS5●●●N and ATV61EXS5●●●Y instead of the DC choke a line reactor is delivered in a separate supply field)

5 Air outlet through metal grid with splash water protection

6 Air inlet (with filter mat) for control part

7 Air outlet (with filter fan) for control part

Protection degree: IP54

Air inlet temperature: 0...+40°C (-10...+40°C with enclosure heating)

Protection degree ATV61EXA•

Overview of available protection degrees

ATV61EXA2 - Enclosure design IP23 with internal cooling circuit

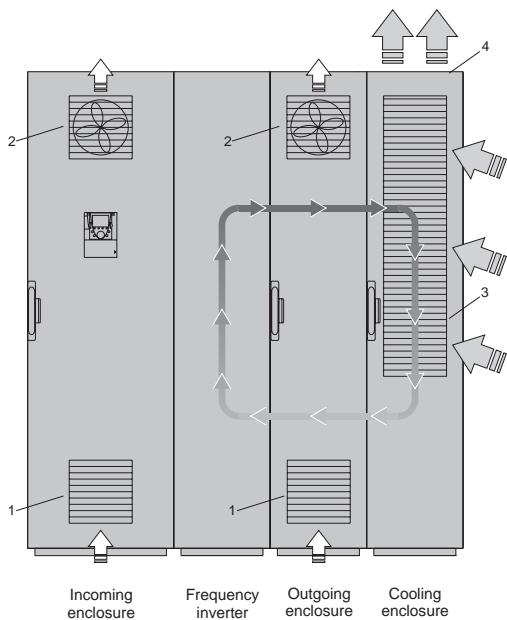

In case of this enclosure design the cooling of the power part takes place in an own enclosure. Here the cooling air is sucked in by the fans in the enclosure door and the air outlet takes place through the enclosure roof. The control part is cooled by fans in the enclosure door.

- 1 Air inlet grid
- 2 Air outlet with fans
- 3 Air inlet grid with fans for power part
- 4 Air outlet grid for power part

Protection degree: IP23

Air inlet temperature: 0...+40°C
(-10...+40°C with enclosure heating)

ATV61EXA5 - Enclosure design IP54 with internal cooling circuit

In case of this enclosure design the cooling of the power part takes place in an own enclosure. Here the cooling air is sucked in by the fans in the enclosure door and the air outlet takes place through the enclosure roof. The control part is cooled by filter fans in the enclosure door.

- 1 Air inlet grid with filter mats
- 2 Air outlet with filter fans
- 3 Air inlet grid with fans for power part
- 4 Air outlet grid for power part

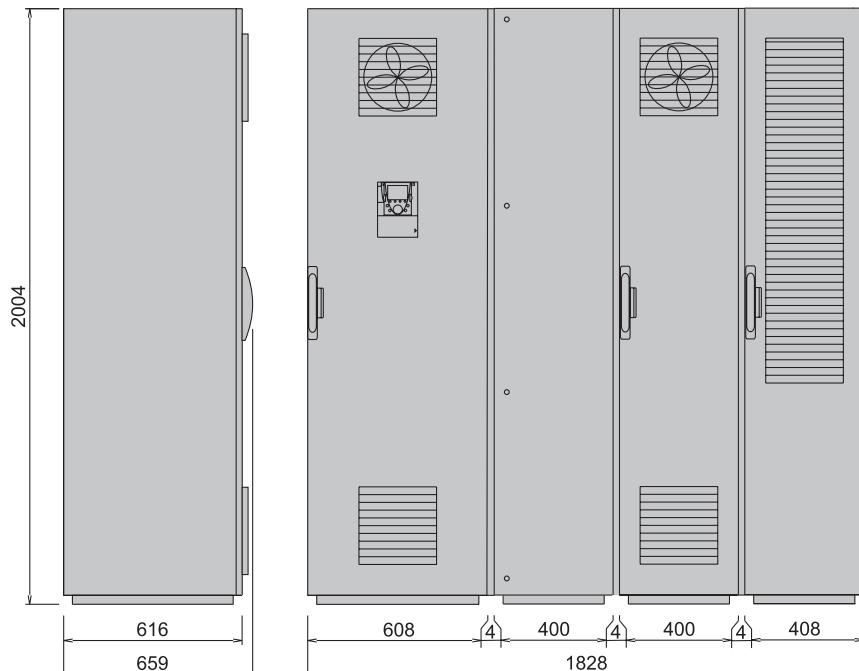

Protection degree: IP54

Air inlet temperature: 0...+40°C
(-10...+40°C with enclosure heating)

Power decrease

Depending on the chosen pulse frequency and the maximum ambient temperature a power increase is possible or a power reduction is necessary. This can be determined by means of the following diagrams.

ATV 61EX••D90N ... EX••C63N

ATV 61EXA•C63N ... EXA•M18N

Please observe the following guidelines to guarantee trouble-free operation of the drive:

- At higher pulse frequencies the allowed motor cable length is reduced (see chapter "Motor cable lengths").
- Select a motor that is at most one type bigger.

If the heat sink temperature is too high, the pulse frequency is automatically reduced to prevent an overload of the inverter.

Fuses and cable cross sections

The Altivar enclosure designs have input fuses built-in as standard. These fuses are for the case that the electronic protective mechanism of the inverter fails. So they are a secondary protection of the inverter to protect the power cables against overload and to protect the input rectifier against an internal short-circuit.

The below-mentioned diameters for 3-wire cables are recommended values for laying the cable in air at max. 40°C ambient temperature, based on the regulations ÖVN EN 1 and VDE 0100.

The lines in the enclosure are dimensioned according to the specification for single conductors XLPE/EPR copper 90°C.

The motor cables are dimensioned for the maximum continuous current. They apply to 0...100 Hz (up to 300 Hz the cable losses increase about 25 % because of the Skin-effect).

In case of other ambient conditions and different regulations the cable diameters must be adjusted.

If the mains fuses blow the inverter already has a primary defect. Therefore, exchanging the blown fuses and switching the inverter on again is not effective. Consequently, the use of circuit breakers is not advantageous and has additionally the disadvantage of a slower switch-off.

A low cost alternative to screened motor cables is the use of NYCY or NYCWY cables (power cables with concentric protective conductor).

The dimensioning of the pre-fuses, mains cable cross sections and mains cable length has to be done taking into account the available mains short circuit current to ensure a safe switch-off in case of a fault!

If required increase the power of the transformer to reach the necessary short circuit capability.

Differing cable cross sections on request.

Motor cable lengths

Because of the permitted mains disturbances, the allowed overvoltages at the motor, the occurring bearing currents and the permitted losses the distance between inverter and motor(s) is limited. The maximum distance heavily depends on the type of motor cable (screened/unscreened) as well as from the used options.

Overvoltages at the motor

Overvoltages at the motor terminals result from reflection in the motor cable. Basically the motors are stressed with measurable higher voltage peaks from a motor cable length of 50 m. Thereby the motor load is nearly independent from the used inverter !

Line supply voltage 500 V Motor insulation for 1600 V phase-to-phase peak voltage and dv/dt resistance
 > 8 kV/ μ s

In order to use standard motors in this voltage range, the Altivar frequency inverters have a function to inhibit short output voltage pulses. With this function the reflection conditional overvoltages are attenuated. The slew rate as well as the EMC load are not influenced by changing this parameter.

At even longer motor cables the use of a "dv/dt filter" is required. Combined with the cable capacitance the option motor choke affects like a filter and limits the voltage peaks at the motor as well as the slew rate of the output pulses.

When the specified motor cable lengths are observed the motor life time can be significantly extended.

Line supply voltage 500 V max. 1300 V phase-to-phase peak voltage and dv/dt < 750 V/ μ s

Observing the specified length of motor cables is absolutely necessary to protect the motor !

EMC interferences

The mains rectifier as well as the IGBT inverter cause high-frequent interferences which drain off more and more stronger to the earth potential with increasing motor cable length. As a result the line-conducted interferences to the mains increase. The attenuation of the line reactors is not longer sufficient and the permitted interference limits are exceeded.

Observing the specified length of motor cables is also necessary for compliance with the EMC limits !

Bearing currents

Common mode bearing currents which even cannot be prevented by means of motors equipped with an insulated bearing are significantly reduced by use of the option motor choke.

Especially in case of big motors with middle up to high motor cable lengths the option motor choke is considerable to increase the availability of the motor.

Multiplication factors

 The specified lengths of motor cables are recommended limits based on typical motor cables, laying in cable channels, default pulse frequency and maximal output frequency of 100 Hz.

In case of different conditions the recommended cable lengths must be converted by means of the following factors.

If several factors apply, please multiply them.

- The pulse frequency does not correspond to factory default:

at 4 kHz multiply all values by 0.7

- In case of output frequencies higher than 100 Hz:

up to 200 Hz multiply all values by 0.8
up to 300 Hz multiply all values by 0.5

- Instead of two parallel cables one thicker cable is used:

multiply all values by 1.5

- In case of 6-pole motor cabling (e.g. for star/delta starting circuit): multiply all values by 0.75

- In case of parallel motors with their centre near the inverter values must be converted in compliance with the number of motors.
When an adjusted motor choke is used for each motor, the following values in brackets apply.

at 2 motors multiply all values by 0.40 (0.80)
at 3 motors multiply all values by 0.25 (0.60)
at 4 motors multiply all values by 0.15 (0.40)
at 5 motors multiply all values by 0.10 (0.25)

- If the centre of the parallel motors is near the motors, following factors for conversion apply:

at 2 motors multiply all values by 0.80
at 3 motors multiply all values by 0.60
at 4 motors multiply all values by 0.40
at 5 motors multiply all values by 0.25

Recommended maximum lengths of motor cables in 2nd environment (industrial environment)**C3 (EN 55011 - class A group 2)**

no option	15 m	screened cable
-----------	------	----------------

with motor choke	50 m	screened cable
------------------	------	----------------

Available options

To enlarge the field of applications, various options are available concerning control and operation, extensions referring to the electric arrangement and to increase the protection degree.

General enclosure options					
Allocation table for options					
Option	Brief description	Order number	Weight [kg]	Reference	
Inputs/outputs					
Basic I/O extension card	Terminal extension for additional digital inputs and outputs	VW3 A3E 201	0.320	See product catalogue	
Extended I/O extension card	Terminal extension for additional analog and digital inputs and outputs	VW3 A3E 202	0.300	See product catalogue	
Control terminals X12	Control terminals for the basic inverter	VW3 AE 1201	0.700	Page 145	
Control terminals X12, X13	Control terminals for the basic device and the I/O option cards VW3 A3E 201 and 202.	VW3 AE 1202	0.900	Page 145	
Adapter for 115 V logic inputs	Enables the use of 115 V logic signals.	VW3 A3E 101	0.200	See product catalogue	
Relay output OC	Relay for digital output (Open collector)	VW3 AE 2201	0.100	Page 146	
Multi-pump card	Allows the adaptation to pump applications.	VW3 A3E 502	0.320	See product catalogue	
Extended multi-pump card	This card supports all multi-pump applications.	VW3 A3E 503	0.320	See product catalogue	
"Controller inside" card	Programmable card for integration of control system functions.	VW3 A3E 501	0.300	See product catalogue	
Additional electrical input isolation	Isolated amplifier with optoelectronic potential separation connected to the analog input of the inverter	VW3 AE 1901	0.100	Page 147	
Isolated amplifier (output)	Isolated amplifier with optoelectronic potential separation connected to the analog output of the inverter	VW3 AE 1902	0.100	Page 148	
Encoder feedback					
Encoder interface card 5 V / RS422	Extension card for encoder feedback. Supply voltage 5 V / RS422	VW3 A3E 401	0.200		
Encoder interface card 12 V OC	Extension card for encoder feedback. Supply voltage 12 V / open collector output	VW3 A3E 403	0.200		
Encoder interface card 15 V OC	Extension card for encoder feedback. Supply voltage 15 V / open collector output	VW3 A3E 404	0.200		
Encoder interface card 12 V (push-pull)	Extension card for encoder feedback. Supply voltage 12 V / push-pull	VW3 A3E 405	0.200		
Encoder interface card 15 V (push-pull)	Extension card for encoder feedback. Supply voltage 15 V / push-pull	VW3 A3E 406	0.200		
Encoder interface card 24 V (push-pull)	Extension card for encoder feedback. Supply voltage 24 V / push-pull	VW3 A3E 407	0.200		
Fieldbuses (buildings)					
LonWorks communication card	Option card for control of the inverter via LonWorks.	VW3 A3E 312	0.300		
METASYS N2 communication card	Option card for control of the inverter via METASYS N2.	VW3 A3E 313	0.300		
APOGEE FLN communication card	Option card for control of the inverter via APOGEE FLN.	VW3 A3E 314	0.300		
BACnet communication card	Option card for control of the inverter via BACnet.	VW3 A3E 315	0.300		

See product catalogue

Allocation table for options					
Option	Brief description	Order number	Weight [kg]	Reference	
Fieldbuses (industry)					
Modbus TCP/IP communication card	Option card for control of the inverter via Modbus TCP/IP.	VW3 A3E 310	0.300		
Modbus TCP/IP Daisy Chain communication card	Option card for control of the inverter via Modbus TCP/IP Daisy Chain.	VW3 A3E 310d	0.300		
Ethernet/IP communication card	Option card for control of the inverter via Ethernet/IP.	VW3 A3E 316	0.300		
Fipio communication card	Option card for control of the inverter via Fipio.	VW3 A3E 311	0.300		
Modbus Plus communication card	Option card for control of the inverter via Modbus plus.	VW3 A3E 302	0.300		
DeviceNet communication card	Option card for control of the inverter via DeviceNet.	VW3 A3E 309	0.300		
Interbus communication card	Option card for control of the inverter via Interbus.	VW3 A3E 304	0.300		
CC-Link communication card	Option card for control of the inverter via CC-Link.	VW3 A3E 317	0.300		
Modbus/Uni-Telway communication card	Option card for control of the inverter via Modbus/Uni-Telway.	VW3 A3E 303	0.300		
Profibus DP communication card	Option card for control of the inverter via Profibus DP.	VW3 A3E 307	0.300		
Profibus DPv1 communication card	Option card for control of the inverter via Profibus DPv1.	VW3 A3E 307 S371	0.300		
Safety - monitoring of the motor					
Safe standstill with button		VW3 AE 1501	0.100	Page 152	
Safe standstill with relay	This function prevents any unintended start-up of the motor and guarantees the safety of the machine and plant personnel.	VW3 AE 1502	0.100	Page 152	
Safe standstill with relay (delayed)		VW3 AE 1503	0.100	Page 152	
PTC-relay	PTC thermistor relay to monitor the PTC thermistors in the motor	VW3 AE 2001	0.100	Page 149	
PTC-relay with PTB certificate	PTC thermistor relay with PTB certificate to monitor the PTC thermistors in the motor in EX-environments	VW3 AE 2002	0.100	Page 150	
Pt100 relay for motor winding	Pt100 relay to monitor the Pt100 sensors in the motor winding	VW3 AE 2003	0.300	Page 150	
Pt100 relay for motor bearings	Pt100 relay to monitor the Pt100 sensors in the motor bearings	VW3 AE 2004	0.300	Page 150	
Pt100 relay for transformer	Pt100 relay to monitor the Pt100 sensors in the transformer	VW3 AE 2005	0.300	Page 150	
Further enclosure options					
Insulation monitoring	Monitors each phase to earth fault (only for IT networks)	VW3 AE 2601	5.000	Page 155	
Design for IT networks	The frequency inverter will be prepared for the connection to non-grounded networks (IT networks).	VW3 AE 2701	–	Page 155	
External 230V AC supply terminals	Provides the terminals and the protection for an external 230 V supply voltage.	VW3 AE 1301	0.100	Page 156	
Buffer voltage 24 V DC power supply	24 V DC power supply with fuse protection.	VW3 AE 1401	2.200	Page 157	
External 24 V DC supply terminals	Provides the terminals and the protection for an external 24 V buffer voltage.	VW3 AE 1402	0.100	Page 157	
Enclosure lighting	Fluorescent lamp and a power socket 230V AC	VW3 AE 1601	1.500	Page 158	
Key switch (Local / Remote)	Key switch in the enclosure door for switching between terminals/bus and local operation	VW3 AE 1801	0.200	Page 159	
Motor heating	Includes a circuit breaker, a contactor and the terminals to connect a motor heating	VW3 AE 2101	0.200	Page 158	
External Motor fan	Includes a circuit breaker, a contactor and the terminals to connect an external motor fan	VW3 AE 2102	0.200	Page 159	
Voltmeter 400 V	Measuring instrument built-in in the enclosure door, which indicates the line voltage.	VW3 AE 2301	0.400	Page 159	
Voltmeter 500 V	Measuring instrument built-in in the enclosure door, which indicates the line voltage.	VW3 AE 2302	0.400	Page 159	
Voltmeter 690 V	Measuring instrument built-in in the enclosure door, which indicates the line voltage.	VW3 AE 2303	0.400	Page 159

Enclosure options depending on the power

Option	Brief description	Reference
Braking unit	Limits the DC-voltage at generator operation	Page 161
Door handle for main switch	Enables handling without opening the enclosure door	Page 162
Circuit breaker	Provides a safe switching-off at overload	Page 163
Door handle for circuit breaker	Enables handling without opening the enclosure door	Page 164
Undervoltage coil 230 V	When there is no voltage at the undervoltage coil, the circuit breaker switches off.	Page 164
Undervoltage coil 110 V	When there is no voltage at the undervoltage coil, the circuit breaker switches off.	Page 165
230 V motor for circuit breaker	Remote control of the circuit breaker via control commands is possible by means of this motor drive.	Page 165
110 V motor for circuit breaker	Remote control of the circuit breaker via control commands is possible by means of this motor drive.	Page 166
Line contactor	Used for the function "line contactor control" to disconnect the drive from the mains	Page 167
12-pulse supply	Contains the components for 12-pulse supply	Page 168
Amperemeter	Measuring instrument built-in in the enclosure door, which indicates the line current.	Page 169
Enclosure heating	Heats the enclosure to avoid frost and condensation up to an ambient temperature of -10°C	Page 170
Motor choke	Reduces the slew rate on the output of the inverter to protect the motor	Page 171
Cable entry via the top	Allows connection of the line and the motor cables from above	Page 173
Enclosure plinth	200 mm plinth	Page 174
Plinth grill fine	Grill for the front side of the plinth of the enclosure	Page 176
Air condition	Cools the power losses of the control part to avoid filter mats in the enclosure door	Page 176

Description

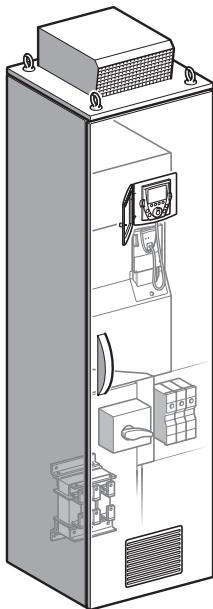

Altivar 61 Plus

ATV61EX••••Y

Mains voltage 690 V

Inverters in standard enclosures for 690 V networks

The basic equipment contains:

- Frequency inverter ATV61 with integrated EMC filter
- Mains connection on main switch
- Main switch (without door handle)
- Superfast semiconductor fuses for inverter protection
- Line reactor
For ATV61EXA•••Y the line reactor is available as option.
- LCD operating panel (mounted into the enclosure door)
- Terminals/bars for motor connection
- Control transformer for 400 V and 230 V to supply the cooling system as well as optional components.
- Protection degree IP23:
air inlet through the enclosure door, air outlet through the enclosure roof.
At higher power the power part is cooled by an internal cooling circuit, the control part is cooled by fans in the enclosure door. Air flow through grid in the enclosure door.
- Protection degree IP54:
air inlet through the enclosure door, air outlet through fan on the top.
At higher power the power part is cooled by an internal cooling circuit, the control part is cooled by fans in the enclosure door. Air flow through grid with filter in the enclosure door.
- Protection degree IP54 with separated air flow:
air flow through the plinth of the enclosure and mounted air guidance hood. Cooling of the control part by means of filter fans in the enclosure door.
- Inflow coolant temperature 0...40°C
(up to 50°C with derating)
- Enclosure Sarel S6000, color RAL 7032
- Multilingual operating instructions
- Documentation-CD-ROM with parameterization instructions, fieldbus instructions, operating and parameterizing software,...
- Enclosure layout plans consisting of circuit diagram, terminal connection table, list of materials and design drawing

Description

Altivar 61 Plus

ATV61EX••••Y

Mains voltage 690 V

General technical data	
Input	
Voltage	690 V $\pm 10\%$ for TT, TN-C, TN-S or IT networks *)
Frequency	50 / 60 Hz $\pm 5\%$ *)
Overvoltage class	Class III according to EN 50178
*) Technical data and remarks for mains voltages are given in chapter "Mains conditions", page 21.	
Output	
Control method	Vector-oriented flux control without feedback, V/f characteristic, energy saving system
Voltage	3 AC 0...100% mains voltage, dynamic voltage stabilization
Overload	20 % for 60 seconds per 10 minutes, 35 % for 2 seconds
Pulse frequency	2.5 kHz, adjustable from 2...4.9 kHz
Frequency / Base frequency	0.1...500 Hz / 25...500 Hz, adjustable
Short circuit protection	All-pole protected against short circuit and earth fault by means of overcurrent switch-off
Design	Floor-standing enclosure
Cooling	forced
Frequency resolution, digital	0.01 Hz / 50 Hz, frequency stability: $\pm 0.01\% / 50\text{ Hz}$
Speed accuracy	V/f mode: slip frequency VC without feedback $0.3 \times \text{slip frequency}$
Mechanical strength	
Mechanical vibration	According to IEC/EN 60068-2-6 1.5 mm at 3...10 Hz, 0.6 g at 10...200 Hz (3M3 according to IEC/EN 60721-3-3)
Shock	According to IEC/EN 60068-2-27 4 g for 11 ms (3M2 according to IEC/EN 60721-3-3)
Ambient conditions	
Operating temperature	0...+40°C (-10...+40°C with enclosure heating) 3K3 according to IEC/EN 60721-3-3 up to +50°C with derating
Storage / Transport temperature	-25...+70°C
Protection degree	selective: ATV61EXC2●●●Y ... IP23 ATV61EXC5●●●Y ... IP54 with air intake through filter mats ATV61EXS5●●●Y ... IP54 with separated air flow ATV61EXA2●●●Y ... IP23 with internal cooling circuit ATV61EXA5●●●Y ... IP54 with internal cooling circuit
Environmental class / Humidity	Class 3K3 in accordance with IEC/EN 60721-3-3 / no condensation, max. 95 % relative humidity
Altitude	Up to 1000 m, beyond power decrease of 1 % per 100 m up to 3000 m
Allowed pollution	Pollution degree: for IP23 design: pollution degree 2 according to EN 61800-5-1 for IP54 design: pollution degree 3 according to EN 61800-5-1 Chemical / mechanical classification: 3C2 and 3S2 according to EN 60721-3-3
Protection class	Class 1 according to EN 50178
Standards	
Basic standard	The devices are designed, built and tested on the basis of EN 50178.
EMC immunity	According to EN 61800-3, 1st and 2nd environment (IEC 1000-4-2; IEC 1000-4-3; IEC 1000-4-4; IEC 1000-4-5; IEC 1000-4-6)
EMC emission	In accordance with product standard EN 61800-3, 2nd environment, category C3
Insulation	Galvanic insulation in accordance with EN 50178 PELV (Protective Extra Low Voltage)
Standards	CE

Frequency inverters are a product of the restricted sales according to IEC 61800-3. In a residential environment this product can cause radio frequency interferences whereupon the user can be called on to take suitable measures.

Protection degree ATV61EXC• and ATV61EXS5

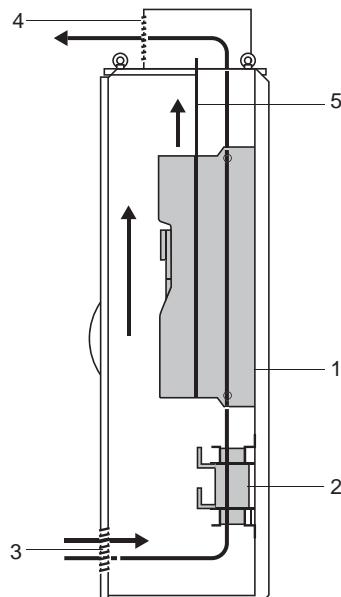

In order to adapt the utmost robust Altivar product line with enclosure design optimal to the individual requests of the system, these enclosure units are available in three different designs. Each solution contains a clearly specified and tested cooling system which provides highest operating safety.

The standard design of the ATV61 enclosure units complies with protection degree IP23. If a higher protection degree is desired or required, there are two IP54 solutions available.

- IP54 with filter mats
- IP54 with separated air flow

Overview of standardised protection degrees

ATV61EXC2 - Standard enclosure design IP23

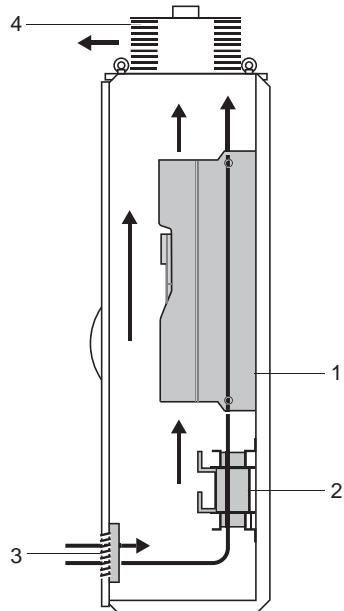

In this case the input of the cooling air takes place by the enclosure door and the output through the top of the enclosure. The air flow must not be constrained by means of fixtures or filter mats.

- 1 Frequency inverter ATV61
- 2 Line reactor
- 3 Air inlet grid (without filter mat) for control part and power part
- 4 Metal cover with splash water protection
- 5 Guided air flow to avoid internal air short-cuts

Protection degree: IP23

Air inlet temperature: 0...+40°C (-10...+40°C with enclosure heating)

ATV61EXC5 - Enclosure design IP54

At protection degree IP54 with filter mats the input of the cooling air takes place through the filter mats in the enclosure door and the output through the fan at the top of the enclosure.

1 Frequency inverter ATV61

2 Line reactor

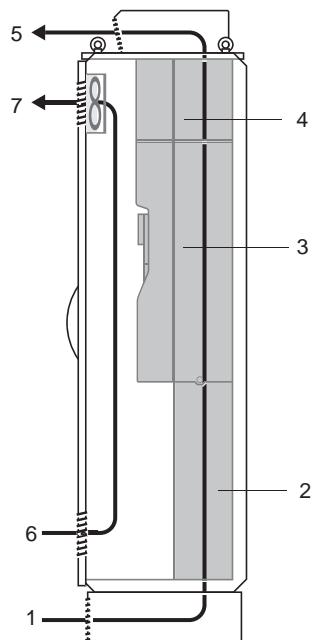

3 Air inlet grid (with filter mat)

4 Fan (with filter mat)

Protection degree: IP54

Air inlet temperature: 0...+40°C (-10...+40°C with enclosure heating)

ATV61EXS5 - Enclosure design IP54 with separated air flow

In case of protection degree IP54 with separate air channel the cooling air inlet for the power part takes place through the plinth and the air outlet through the enclosure roof. The control part is cooled by filter fans in the enclosure door or by an optional air condition.

1 Cooling air for power part (via enclosure plinth)

2 Air guidance channel

3 Frequency inverter ATV61

4 DC choke
(at ATV61EXS5●●●N and ATV61EXS5●●●Y instead of the DC choke a line reactor is delivered in a separate supply field)

5 Air outlet through metal grid with splash water protection

6 Air inlet (with filter mat) for control part

7 Air outlet (with filter fan) for control part

Protection degree: IP54

Air inlet temperature: 0...+40°C (-10...+40°C with enclosure heating)

Protection degree ATV61EXA•

Overview of available protection degrees

ATV61EXA2 - Enclosure design IP23 with internal cooling circuit

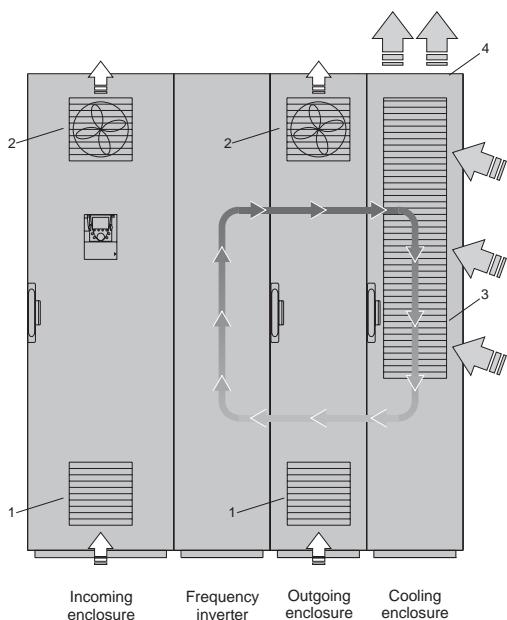

In case of this enclosure design the cooling of the power part takes place in an own enclosure. Here the cooling air is sucked in by the fans in the enclosure door and the air outlet takes place through the enclosure roof. The control part is cooled by fans in the enclosure door.

- 1 Air inlet grid
- 2 Air outlet with fans
- 3 Air inlet grid with fans for power part
- 4 Air outlet grid for power part

Protection degree: IP23

Air inlet temperature: 0...+40°C
(-10...+40°C with enclosure heating)

ATV61EXA5 - Enclosure design IP54 with internal cooling circuit

In case of this enclosure design the cooling of the power part takes place in an own enclosure. Here the cooling air is sucked in by the fans in the enclosure door and the air outlet takes place through the enclosure roof. The control part is cooled by filter fans in the enclosure door.

- 1 Air inlet grid with filter mats
- 2 Air outlet with filter fans
- 3 Air inlet grid with fans for power part
- 4 Air outlet grid for power part

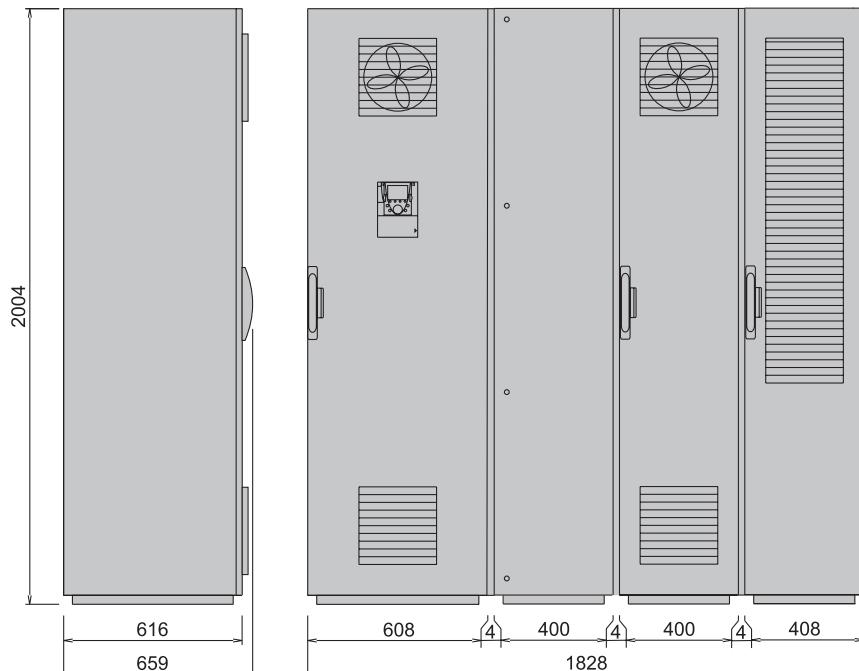

Protection degree: IP54

Air inlet temperature: 0...+40°C
(-10...+40°C with enclosure heating)

Power decrease

Depending on the chosen pulse frequency and the maximum ambient temperature a power increase is possible or a power reduction is necessary. This can be determined by means of the following diagrams.

ATV 61EX●●C11Y ... EX●●C80Y

ATV 61EXA●C80Y ... EXA●M24Y

Please observe the following guidelines to guarantee trouble-free operation of the drive:

- At higher pulse frequencies the allowed motor cable length is reduced (see chapter "Motor cable lengths").
- Select a motor that is at most one type bigger.

If the heat sink temperature is too high, the pulse frequency is automatically reduced to prevent an overload of the inverter.

Fuses and cable cross sections

The Altivar enclosure designs have input fuses built-in as standard. These fuses are for the case that the electronic protective mechanism of the inverter fails. So they are a secondary protection of the inverter to protect the power cables against overload and to protect the input rectifier against an internal short-circuit.

The below-mentioned diameters for 3-wire cables are recommended values for laying the cable in air at max. 40°C ambient temperature, based on the regulations ÖVN EN 1 and VDE 0100.

The lines in the enclosure are dimensioned according to the specification for single conductors XLPE/EPR copper 90°C.

The motor cables are dimensioned for the maximum continuous current. They apply to 0...100 Hz (up to 300 Hz the cable losses increase about 25 % because of the Skin-effect).

In case of other ambient conditions and different regulations the cable diameters must be adjusted.

If the mains fuses blow the inverter already has a primary defect. Therefore, exchanging the blown fuses and switching the inverter on again is not effective. Consequently, the use of circuit breakers is not advantageous and has additionally the disadvantage of a slower switch-off.

A low cost alternative to screened motor cables is the use of NYCY or NYCWY cables (power cables with concentric protective conductor).

The dimensioning of the pre-fuses, mains cable cross sections and mains cable length has to be done taking into account the available mains short circuit current to ensure a safe switch-off in case of a fault!

If required increase the power of the transformer to reach the necessary short circuit capability.

Differing cable cross sections on request.

Motor cable lengths

Because of the permitted mains disturbances, the allowed overvoltages at the motor, the occurring bearing currents and the permitted losses the distance between inverter and motor(s) is limited. The maximum distance heavily depends on the type of motor cable (screened/unscreened) as well as from the used options.

Overvoltages at the motor

Overvoltages at the motor terminals result from reflection in the motor cable. Basically the motors are stressed with measurable higher voltage peaks from a motor cable length of 50 m. Thereby the motor load is nearly independent from the used inverter !

Line supply voltage 690 V Motor insulation for 2000 V phase-to-phase peak voltage and dv/dt resistance
 $> 8 \text{ kV}/\mu\text{s}$

In order to use standard motors in this voltage range, the Altivar frequency inverters have a function to inhibit short output voltage pulses. With this function the reflection conditional overvoltages are attenuated. The slew rate as well as the EMC load are not influenced by changing this parameter.

At even longer motor cables the use of a "dv/dt filter" is required. Combined with the cable capacitance the option motor choke affects like a filter and limits the voltage peaks at the motor as well as the slew rate of the output pulses.

When the specified motor cable lengths are observed the motor life time can be significantly extended.

Line supply voltage 690 V max. 1800 V phase-to-phase peak voltage
and dv/dt $< 1000 \text{ V}/\mu\text{s}$

Observing the specified length of motor cables is absolutely necessary to protect the motor !

EMC interferences

The mains rectifier as well as the IGBT inverter cause high-frequent interferences which drain off more and more stronger to the earth potential with increasing motor cable length. As a result the line-conducted interferences to the mains increase. The attenuation of the line reactors is not longer sufficient and the permitted interference limits are exceeded.

Observing the specified length of motor cables is also necessary for compliance with the EMC limits !

Bearing currents

Common mode bearing currents which even cannot be prevented by means of motors equipped with an insulated bearing are significantly reduced by use of the option motor choke.

Especially in case of big motors with middle up to high motor cable lengths the option motor choke is considerable to increase the availability of the motor.

Multiplication factors

 The specified lengths of motor cables are recommended limits based on typical motor cables, laying in cable channels, default pulse frequency and maximal output frequency of 100 Hz.

In case of different conditions the recommended cable lengths must be converted by means of the following factors.

If several factors apply, please multiply them.

- The pulse frequency does not correspond to factory default:

at 4 kHz multiply all values by 0.7

- In case of output frequencies higher than 100 Hz:

up to 200 Hz multiply all values by 0.8
up to 300 Hz multiply all values by 0.5

- Instead of two parallel cables one thicker cable is used:

multiply all values by 1.5

- In case of 6-pole motor cabling (e.g. for star/delta starting circuit): multiply all values by 0.75

- In case of parallel motors with their centre near the inverter values must be converted in compliance with the number of motors.
When an adjusted motor choke is used for each motor, the following values in brackets apply.

at 2 motors multiply all values by 0.40 (0.80)
at 3 motors multiply all values by 0.25 (0.60)
at 4 motors multiply all values by 0.15 (0.40)
at 5 motors multiply all values by 0.10 (0.25)

- If the centre of the parallel motors is near the motors, following factors for conversion apply:

at 2 motors multiply all values by 0.80
at 3 motors multiply all values by 0.60
at 4 motors multiply all values by 0.40
at 5 motors multiply all values by 0.25

Recommended maximum lengths of motor cables in 2nd environment (industrial environment)**C3 (EN 55011 - class A group 2)**

no option	15 m	screened cable
-----------	------	----------------

Enclosure options depending on the power

Option	Brief description	Reference
Braking unit	Limits the DC-voltage at generator operation	Page 161
Door handle for main switch	Enables handling without opening the enclosure door	Page 162
Circuit breaker	Provides a safe switching-off at overload	Page 163
Door handle for circuit breaker	Enables handling without opening the enclosure door	Page 164
Undervoltage coil 230 V	When there is no voltage at the undervoltage coil, the circuit breaker switches off.	Page 164
Undervoltage coil 110 V	When there is no voltage at the undervoltage coil, the circuit breaker switches off.	Page 165
230 V motor for circuit breaker	Remote control of the circuit breaker via control commands is possible by means of this motor drive.	Page 165
110 V motor for circuit breaker	Remote control of the circuit breaker via control commands is possible by means of this motor drive.	Page 166
Line contactor	Used for the function "line contactor control" to disconnect the drive from the mains	Page 167
12-pulse supply	Contains the components for 12-pulse supply	Page 168
Amperemeter	Measuring instrument built-in in the enclosure door, which indicates the line current.	Page 169
Enclosure heating	Heats the enclosure to avoid frost and condensation up to an ambient temperature of -10°C	Page 170
Motor choke	Reduces the slew rate on the output of the inverter to protect the motor	Page 171
Cable entry via the top	Allows connection of the line and the motor cables from above	Page 173
Enclosure plinth	200 mm plinth	Page 174
Plinth grill fine	Grill for the front side of the plinth of the enclosure	Page 176
Air condition	Cools the power losses of the control part to avoid filter mats in the enclosure door	Page 176

Wiring diagram

The following diagrams show the typical wiring of the frequency inverters including the options which may be required for protection of the plant or the device, depending on the application.

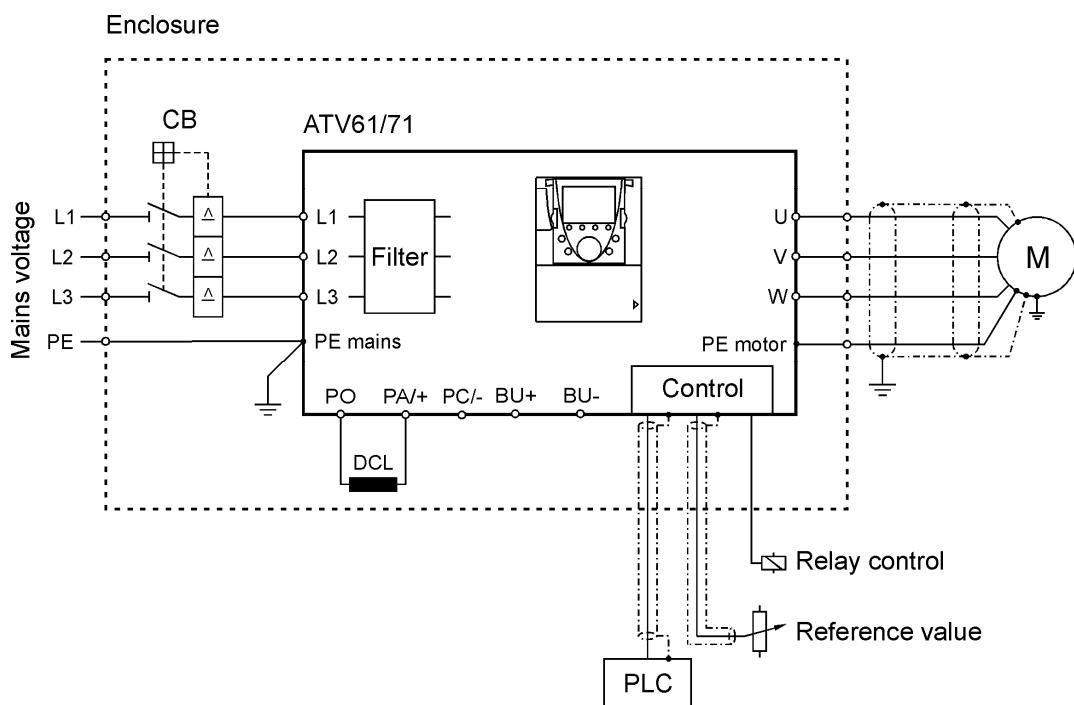

Description of the used abbreviations:

- ATV61/71 Frequency inverter
- MS Main switch built-in as standard
(to be used if required according to the local regulations)
- Option CB Circuit breaker
Can be installed instead of the main switch
- NH Main fuses built-in as standard considering table "chapter "Fuses and cable cross sections" "
- Option LC Line contactor
(to be used if required according to the local regulations)
- Line reactor Line reactor built-in as standard to reduce the current harmonics on the mains caused by the DC link. For ATV61EXA***** it is available as option.
- DCL The DC choke is built-in as standard instead of a line reactor at ATV61EXS5***N4.
- internal filter EMC filter built-in as standard
considering category C3 according to EN 61800-3 "Use in industrial environments"
- Opt. motor choke To reduce the voltage peaks at the motor in case of long motor cables
- Opt. sinus filter For nearly sinusoidal motor voltage and for prevention of additional noises at the motor.
- Option BU Braking unit
At devices with low power a braking transistor is built-in as standard. Beyond it a braking unit can be used optionally. See chapter "Braking unit BU", page 161
- Option BR Braking resistor
Option for short deceleration time or short-time dynamic loads

Optional 12-pulse design

Control terminals X12 for the basic device

The signal inputs and outputs of the frequency inverter are wired to the customer terminals X12 with plug connection (max. cable cross section: 2.5 mm²).

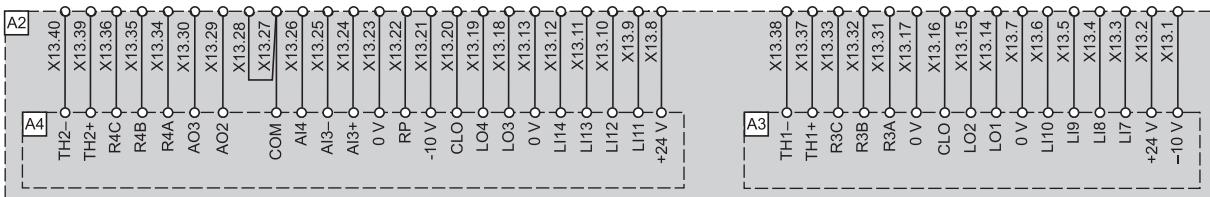

Order number: VW3 AE 1201

A1 Frequency inverter ATV61

A2 Enclosure

Control terminals X12 and X13 for the basic device and I/O extension cards

The signal inputs and outputs of the frequency inverter and of the option cards are wired to the customer terminals X12 and X13 with plug connection (max. cable cross section: 2.5 mm²).

Order number: VW3 AE 1202

A1 Frequency inverter ATV61

A2 Enclosure

A3 Basic I/O extension card

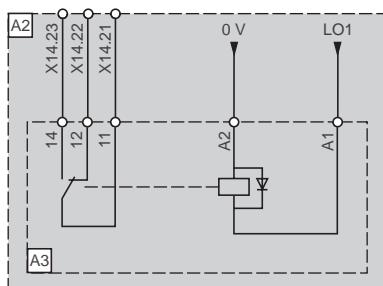

A4 Extended I/O extension card

Relay output OC

This option contains a 24 V DC relay with a switching capacity of max. 6 A at 250 V AC or 30 V DC. The potential-free signal outputs are directly connected to the customer control terminals X14 (max. cable cross section: 4 mm²). The inductor is wired to the logic output of the frequency inverter. With this option each logic status information of the inverter or the process can be issued as a message by means of a logic output.

This option requires a 24 V DC buffer voltage. See chapter "Buffer voltage 24 V DC", page 157 for further information.

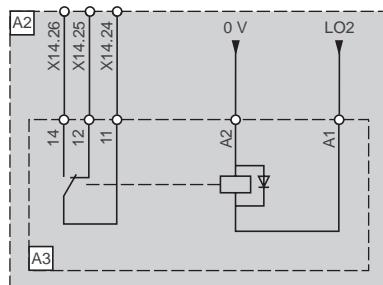

**Relay output LO1**

Order number: VW3 AE 2201

A2 Enclosure
A3 Relay

This option requires a basic I/O extension card!

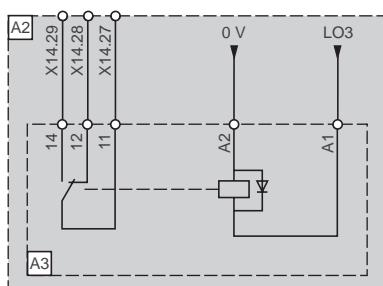

**Relay output LO2**

A3 Relay

This option requires an extended I/O extension card!

**Relay output LO4**

Order number: VW3 AE 2201

A2 Enclosure
A3 Relay

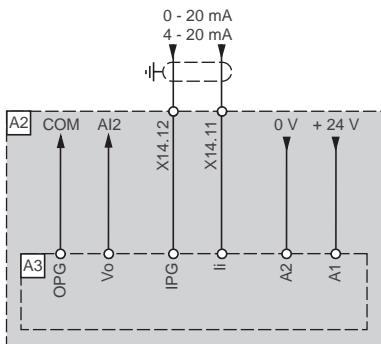

This option requires an extended I/O extension card!

Additional electrical input isolation

This option contains an isolated amplifier configured for an analog input. The signal inputs of the amplifier are directly connected to the customer control terminals X14 (max. cable cross section: 4 mm²). The output is wired to the analog input of the frequency inverter. It operates according to the principle of optoelectronic potential separation and has three-way separation between input, output and supply.

This option requires a 24 V DC buffer voltage. See chapter "Buffer voltage 24 V DC", page 157 for further information.

**Analog input AI2**

Order number: VW3 AE 1901

A2 Enclosure

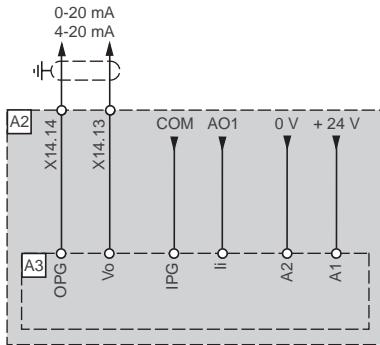

A3 Isolated amplifier

Additional electrical output isolation

This option contains an isolated amplifier configured for an analog output. The signal outputs of the amplifier are directly connected to the customer control terminals X14 (max. cable cross section: 4 mm²). The input is wired to the analog output of the frequency inverter. It operates according to the principle of optoelectronic potential separation and has three-way separation between input, output and supply.

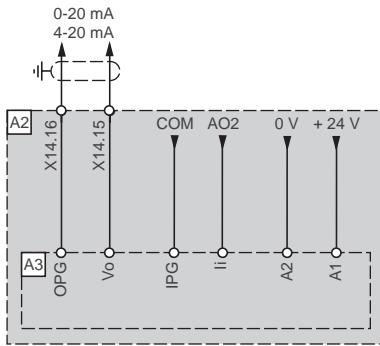

This option requires a 24 V DC buffer voltage. See chapter "Buffer voltage 24 V DC", page 157 for further information.

Analog output AO1

Order number: VW3 AE 1902

A2 Enclosure

A3 Isolated amplifier

Analog output AO2

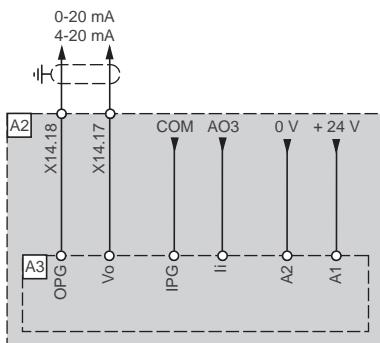

Order number: VW3 AE 1902

A2 Enclosure

A3 Isolated amplifier

This option requires an extended I/O extension card!

Analog output AO3

Order number: VW3 AE 1902

A2 Enclosure

A3 Isolated amplifier

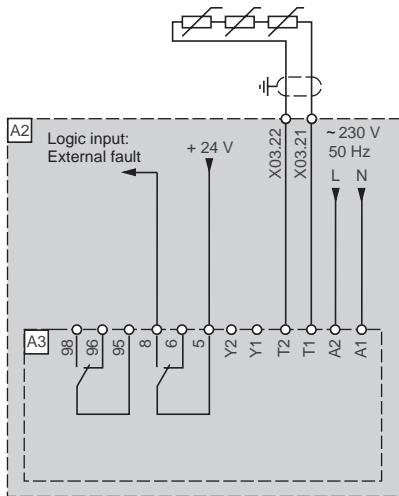

This option requires an extended I/O extension card!

PTC relay

This option consists of a PTC thermistor relay to monitor the PTC thermistors of the motor. Up to three PTC sensors can be connected to this option. The output of the PTC thermistor relay is assigned to the inverter terminals which can be parameterized for alarm or trip. The thermistor input is wired to the customer terminals X03 (max. cable cross section: 4 mm²).

This option requires a 230 V AC supply. See chapter "Supply voltage 230 V AC", page 156 for further information.

Order number: VW3 AE 2001

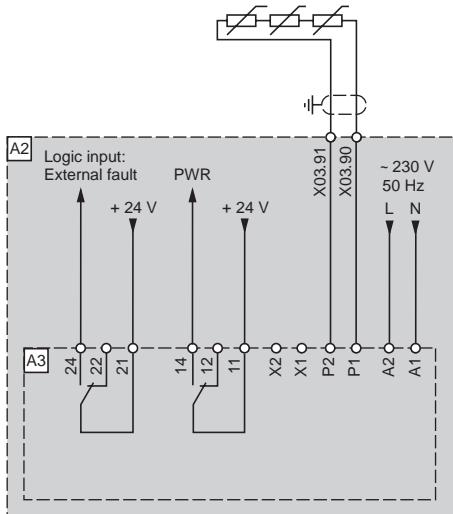

A2 Enclosure

A3 PTC relay

PTC relay with PTB (ATEX) certification

This option consists of a PTC thermistor relay with PTB certificate for operation in EX-environments to monitor the PTC thermistors of the motor. Up to three PTC sensors can be connected to this option. The output of the PTC thermistor relay is assigned to the inverter terminals (PWR). The thermistor input is wired to the customer terminals X03 (max. cable cross section: 4 mm²).

 This option requires a 230 V AC supply. See chapter "Supply voltage 230 V AC", page 156 for further information.

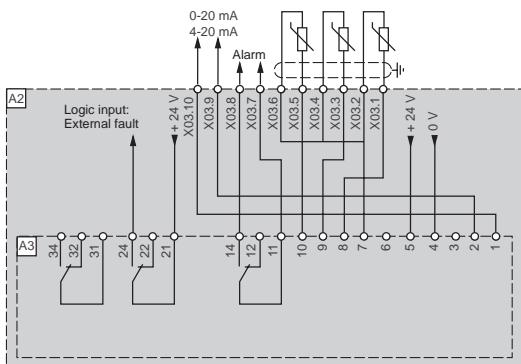

Order number: VW3 AE 2002

A2 Enclosure
A3 PTC relay

Pt100 relay**Pt100 sensors in motor winding**

This option contains a Pt100 relay to monitor the Pt100 sensors of the motor. As standard it is prepared for three sensors for the windings. The alarm message is assigned to the terminals and the trip will cause a trip shut-down at the inverter. The input for the sensors, the alarm relay and the analog output are wired to the customer terminals X03 (max. cable cross section: 4 mm²).

 This option requires a 24 V DC buffer voltage. See chapter "Buffer voltage 24 V DC", page 157 for further information.

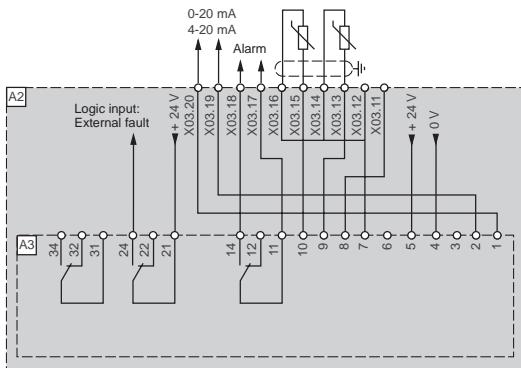

Order number: VW3 AE 2003

A2 Enclosure
A3 Pt100 relay

Pt100 sensors in bearings

This option contains a Pt100 relay to monitor the Pt100 sensors of the motor. As standard it is prepared for two sensors for the bearings. The alarm message is assigned to the terminals and the trip will cause a trip shut-down at the inverter. The input for the sensors, the alarm relay and the analog output are wired to the customer terminals X03 (max. cable cross section: 4 mm²).

 This option requires a 24 V DC buffer voltage. See chapter "Buffer voltage 24 V DC", page 157 for further information.

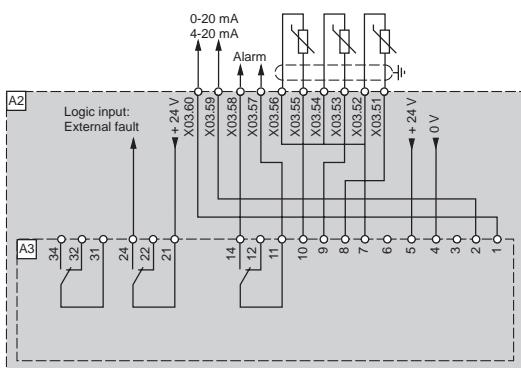

Order number: VW3 AE 2004

A2 Enclosure
A3 Pt100 relay

Pt100 sensors in the transformer

This option contains a Pt100 relay to monitor the Pt100 sensors in the transformer. As standard it is prepared for three sensors for the windings. The alarm message is assigned to the terminals and the trip will cause a trip shut-down at the inverter. The input for the sensors, the alarm relay and the analog output are wired to the customer terminals X03 (max. cable cross section: 4 mm²).

 This option requires a 24 V DC buffer voltage. See chapter "Buffer voltage 24 V DC", page 157 for further information.

Order number: VW3 AE 2005

A2 Enclosure
A3 Pt100 relay

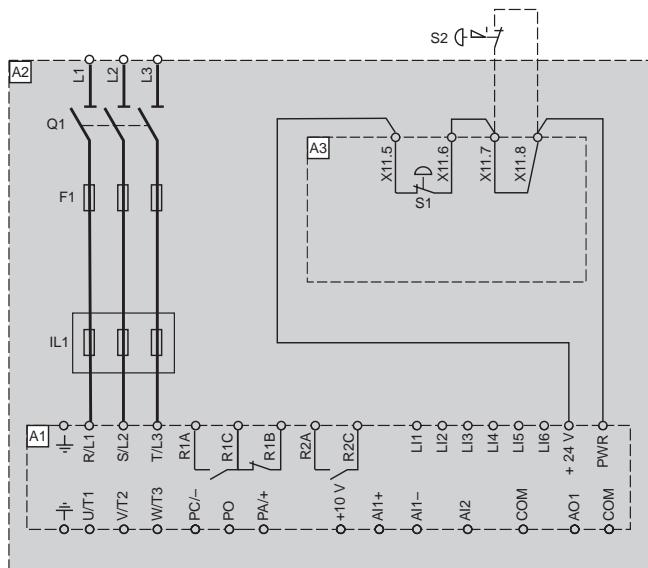

Safe Standstill

The Altivar frequency inverters include the "Safe Standstill" (Power Removal) safety function as standard. This function prevents any unintended start-up of the motor and guarantees the safety of the machine and plant personnel. The Safe Standstill function is wired to the customer terminals X11 (max. cable cross section: 4 mm²).

"Preventa type ATE" fault relay

Order number: VW3 AE 1503

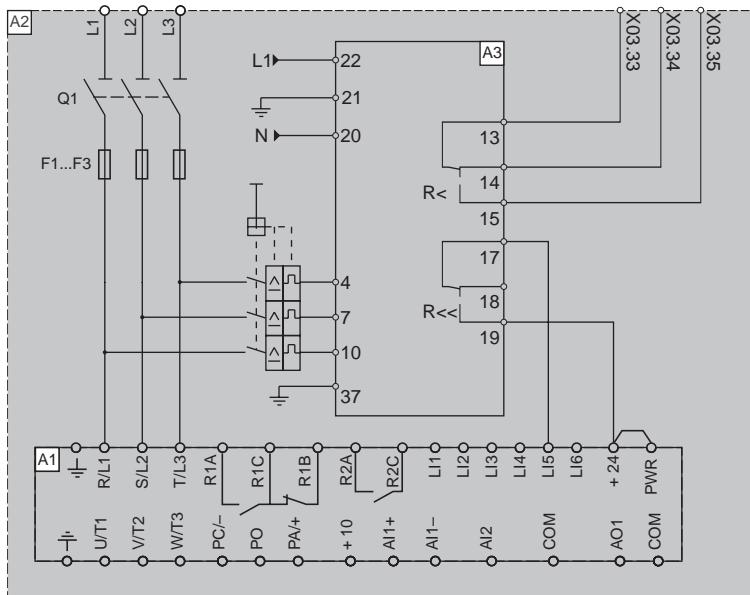

- A1 Frequency inverter ATV61
- A2 Enclosure
- A3 Safety switching device "Preventa XPS-ATE5110"
- A4 Emergency stop button (VW3 AE 1501)
- S3 Emergency stop button consisting of
Mushroom head pushbutton (Harmony style 4: ZB4
BS54)
Auxiliary contact (Harmony style 4: ZB4 BZ102)

Insulation monitoring for IT networks

This option monitors each phase to earth fault.

This option is only qualified for IT networks.

A1 Frequency inverter ATV61

A2 Enclosure

A3 Isolation monitoring device

Order number: VW3 AE 2601

The trigger R<< is connected to the inverter as standard.

The alarm message R< is assigned to the terminals (X3.33 to X3.35).

This option requires a 230 V AC supply. See chapter "Supply voltage 230 V AC", page 156 for further information.

Design for IT networks

The frequency inverter is prepared for connection to nongrounded networks (IT networks).

Order number: VW3 AE 2701

When a 230 V control voltage is required for the ATV61EX••••N4 devices, the option control transformer or an external control supply is necessary.

Control of MV supply

When using this option the frequency inverter is able to control the circuit breaker at the primary side of the mains transformer.

Order number: VW3 AE 2801

Supply voltage 230 V AC

For some options and for the supply of the cooling system of high-power devices a 230 V/50 Hz supply voltage is necessary.

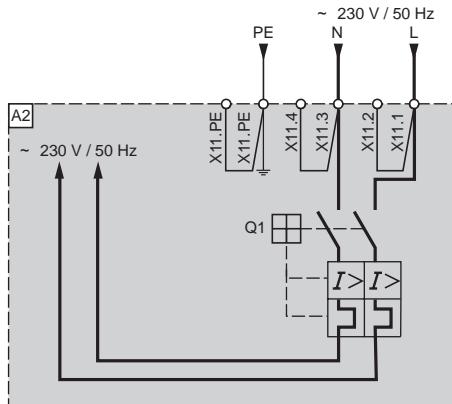

Following devices already include a control voltage transformer for 230 V (partially also for 400 V) as standard:

- ATV61EXA••••N4
- ATV61EX••••N
- ATV61EX••••Y

When the control voltage is provided external, the option "external supply voltage" has to be selected.

Option external supply terminals

This option includes customer terminals X11 (max. cable cross section: 4 mm²) for the connection of an external supply voltage and a circuit breaker with 6 A for protection. The external supply voltage has to be dimensioned for a load from 225 up to 800 kVA, depending on the used 230 V options.

Order number: VW3 AE 1301

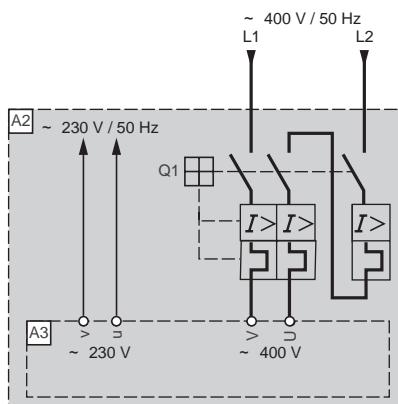

- | | |
|-----------|--------------------|
| A2 | Enclosure |
| Q1 | Circuit breaker 6A |
| X11 | Customer terminals |

Option control transformer 400 V / 230 V

If the 230V supply voltage cannot be provided external, it is possible to integrate a control voltage transformer belated at following devices:

- ATV61EXC••••N4
- ATV61EXS5•••N4

This option includes a supply voltage transformer 400 V / 230 V and a motor circuit breaker.

Order number: VW3 AE 0302 (500 VA)
VW3 AE 0303 (800 VA)

- | | |
|----------|----------------------------|
| A2 | Enclosure |
| A3 | Option control transformer |
| K1 | Line contactor |
| Q1 | Motor circuit breaker |

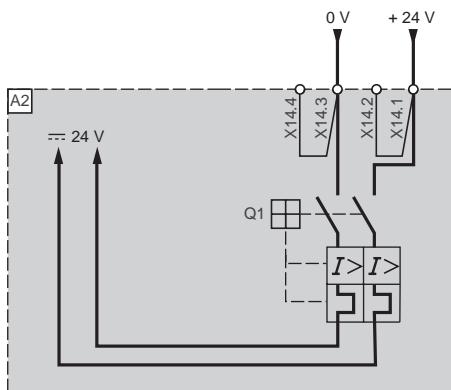

Buffer voltage 24 V DC

A buffer voltage is necessary for the options line contactor (controlled by the inverter), additional electrical isolation and control relay for open collector or if the control electronic of the frequency inverter without mains supply should be in operation (e.g. to keep the bus communication alive).

There are two possibilities to generate this voltage:

External buffer voltage

This option includes customer terminals X14 (max. cable cross section: 4 mm²) for the connection of an external buffer voltage (min. 2 A) and a circuit breaker with 2 A for protection.

Order number: VW3 AE 1402

A2 Enclosure

Q1 Circuit breaker 2A

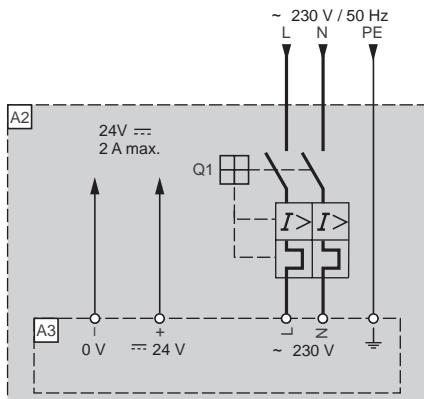

X14 Customer terminals

Additional 24 V DC power supply

This option includes a fuse protected 24 V / 1.6 A DC power supply and a circuit breaker.

This option requires a 230 V AC supply. See chapter "Supply voltage 230 V AC", page 156 for further information.

Order number: VW3 AE 1401

A2 Enclosure

A3 Additional 24 V power supply

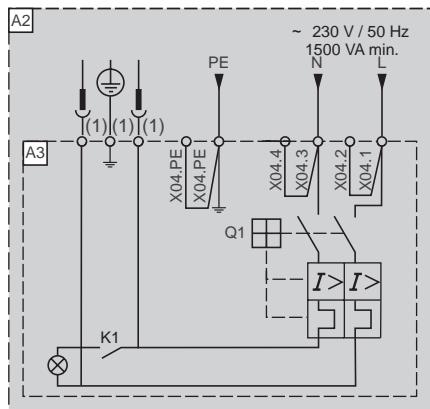

Q1 Circuit breaker 2A

Enclosure lighting

This option contains a fluorescent lamp and a power socket according to VDE standard (230 V / 50 Hz), a door contact switch and a circuit breaker. The option is wired to the customer terminals X04 (max. cable cross section: 4 mm²).

To guarantee an operation after mains off, an additional external 230 V supply (min. 1500 VA) will be necessary! This supply has to be human protected!

Order number: VW3 AE 1601

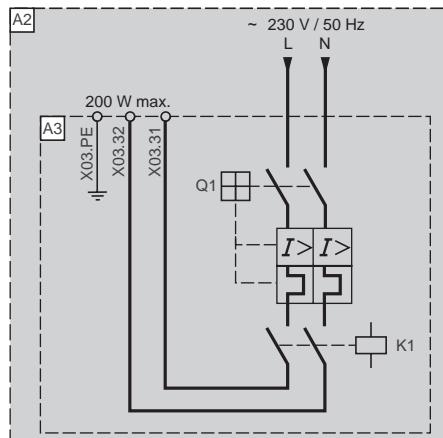

- A2 Enclosure
- A3 Enclosure lamp
- K1 Door contact
- Q1 Circuit breaker 2A

Motor heating

This option includes the terminals and a contactor for an external motor heating. It allows to connect a motor heater up to 200 W. The output is wired to the customer terminals X03 (max. cable cross section: 4 mm²). The activation takes place by the line contactor or by the inverter. The motor heating is active when the inverter is in off-state.

This option requires a 230 V AC supply. See chapter "Supply voltage 230 V AC", page 156 for further information.

Order number: VW3 AE 2101

- A2 Enclosure
- A3 Motor heater
- K1 Contactor
- Q1 Motor circuit breaker

External motor fan

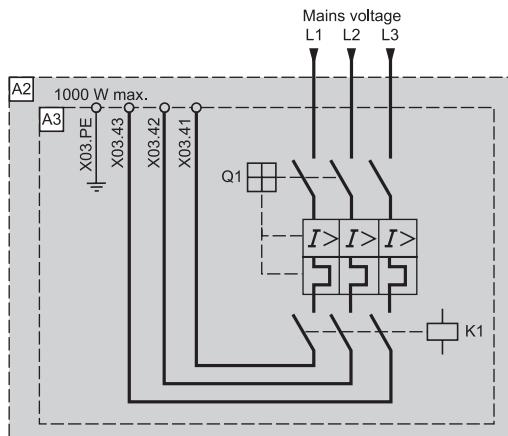

This option includes the terminals, a contactor and a circuit breaker for an external motor fan. It allows to connect an external motor fan up to 1000 W. The output is wired to the customer terminals X03 (max. cable cross section: 4 mm²). The activation takes place by the line contactor or by the inverter. The external motor fan is active when the inverter is in operation.

This option requires a 230 V AC supply. See chapter "Supply voltage 230 V AC", page 156 for further information.

For this option the mains voltage and the voltage of the external fan must be identical. Different voltages on request.

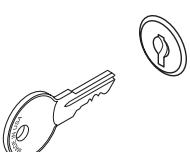

Order number: VW3 AE 2102

A2 Enclosure

A3 Protected supply voltage

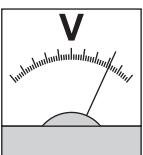

K1 Contactor

Q1 Motor circuit breaker

Key switch „local / remote“

This option includes a key switch built-in the enclosure door, which switches between remote mode (terminals or bus) and panel mode. The panel control of the device occurs by means of the keys on the built-in LED-keypad or the removable operation panel, which is also built-in the enclosure door.

Order number: VW3 AE 1801

Voltmeter „Line voltage“

This option indicates the line voltage. It includes a measuring instrument built-in into the enclosure door and a phase selection switch.

Also in case of 12-pulse supply only one voltmeter is built-in. If two instruments are desired, you have to order two instruments.

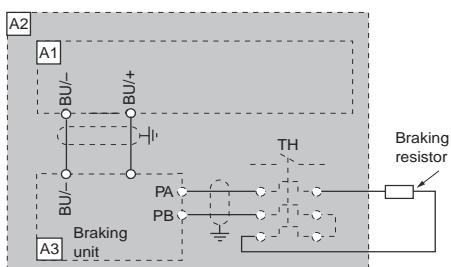

Order number:

■ Supply voltage 400 V VW3 AE 2301

■ Supply voltage 500 V VW3 AE 2302

■ Supply voltage 690 V VW3 AE 2303

Braking unit BU

A1 Frequency inverter ATV61
 A2 Enclosure ATV61EXC•
 A3 Braking unit

The use of the option braking unit is required if more power is returned to the DC link during the braking procedure than the losses in the motor and inverter amount to or the application requires very short braking times.

The braking unit (internally or as an external option) is controlled and monitored by the frequency inverter. If the DC link voltage exceeds an adjustable value due to a braking procedure, an external braking resistor is switched into the DC link as a consumer. The braking resistor converts the power incurred into heat and thus prevents a further rising of the DC link voltage and thus a shut-down with overvoltage.

This option is only necessary for frequency inverters with high power; below these devices there is already a braking transistor built-in!

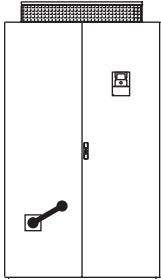

Parameters permit the entry of the resistor data and thus the protection of the braking resistor from an excessively long operating time.

If the braking resistor does not match the overload characteristic to be used or the local regulations require an additional protective device, a thermal relay should be integrated into the mains disconnection mechanism.

Allocation table

Door handle for main switch

The main switch is able to switch the supply voltage of the frequency inverter. The external door handle enables handling of the switch without opening the enclosure door.

The main switch is built-in as standard. This option contains only an extended spindle for the door handle.

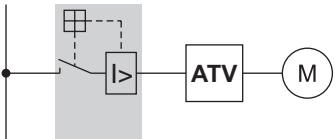

In case of 12-pulse design this option is not permitted because the 12-pulse main switch already includes a door handle.

Line contactor

By using this option, the frequency inverter is able to connect or disconnect itself from the mains by using the function "line contactor control" in combination with a logic output.

This option includes the line contactor and an auxiliary relay to switch the contactor.

More information on the function "line contactor control" can be found in the programming manual.

This option requires a 230 V AC supply. See chapter "Supply voltage 230 V AC", page 156 for further information.

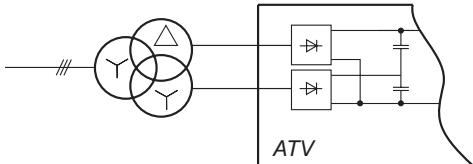

An additional power supply for the 24 V DC buffer voltage will be necessary, when the line contactor has to be controlled by the inverter using the function "line contactor control". See chapter "Buffer voltage 24 V DC", page 157 for further information.

Line reactor

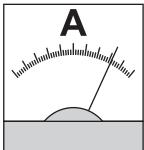

The option line reactor can be used for reduction of the mains current harmonics.

- ☞ When a transformer with matching power is used, the line reactor can be omitted. See also chapter "12-pulse supply", page 23.

Amperemeter „Line current“

This option indicates the line current. It includes a measuring instrument built-in into the enclosure door and a current transformer.

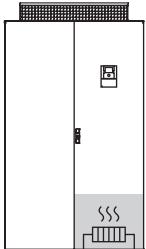

In case of 12-pulse supply one ammeter is built-in in each supply line.

Cubicle heating

This option is used to heat the enclosure in order to avoid frost and condensation up to an ambient temperature of -10°C. It includes the enclosure heating, a thermostat and a circuit breaker. The option is wired to the customer terminals X04 (max. cable cross section: 4 mm²).

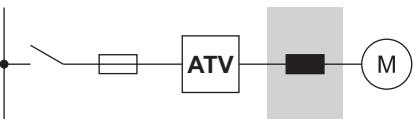

To guarantee an operation after mains off, an additional external 230 V supply (500...1500 VA, depending on option) will be necessary! This supply has to be human protected!

Motor choke

At the output of a voltage source frequency inverter there is a pulsed voltage with a pulse frequency of 2...16 kHz (ATV61EX••••N, Y: 2...6 kHz) and a slew rate of more than 10 kV/μs.

The use of the option motor choke has significant advantages concerning the trouble-free operation of the drive:

- Decrease of the voltage load of the motor – recommended from 50 m, necessary from 100 m for 400 V mains supply
10 m, necessary from 30 m for 690 V mains supply
- Prevention of common mode bearing currents in the motor – especially important at high power
- Great reduction of the influences to other cables – important if the separate laying of motor cables cannot be ensured

By means of the especially developed system the voltage drop at the motor choke is negligible small.

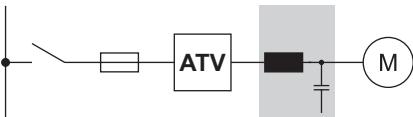

This option cannot be combined with the option sinus filter!

Sinus filter

This option permits nearly sinusoidal motor voltage. Therefore, additional noises at the motor are totally prevented. The sinus filter can be also used alternatively to the option motor choke.

This option cannot be combined with the option sinus filter or option cable entry via the top!

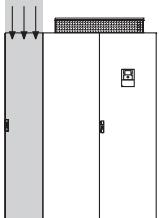

The maximum operating frequency of the sinus filters is 100 Hz!

Cable entry via the top

This option allows the connection of the mains and motor cables from the top of the enclosure.

- ☞ For 12-pulse supply the option "Cable entry via top" is only available on request.
- ☞ For the width of the enclosure in combination with the cable entry via top check out the table in chapter "Width of the cubicle", page 179.

Cubicle plinth 200 mm

There are different additional plinths for the Altivar in IP23 or IP54 design available. Which plinth is necessary depends on the built-in options of the ATV61. Check out the allocation table below. The height of the enclosure will increase of 200 mm.

The ATV61 in IP54 design with separated air flow is delivered with a plinth as standard.

* Therefore is no extra enclosure plinth necessary.

**.... When using a line reactor and line contactor, the option VW3 AE 0821 (40.000 kg) has to be used instead of the option VW3 AE 0820.

Plinth grill fine

Extra fine grill (2.5 mm diameter) for the plinth of the enclosure.

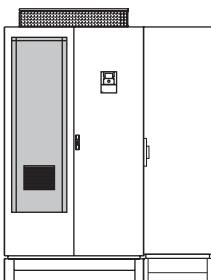

This option is only available for the ATV61 in IP54 with separated air flow !

Allocation table for options depending on the power

Description	ATV61	Order number	Weight [kg]

Air condition (for IP54 with separated air flow)

When using this option the cooling of the control part losses in an IP54 cubicle with separated air flow is possible without filter fans. It includes an air condition mounted in the cubicle door and a circuit breaker. The trip relay is assigned to the inverter terminals and will cause in case of an error a trip shutdown of the inverter.

This option affects the depth of the cubicle!
See chapter "Width of the cubicle", page 179 for further details.

This option is only available for the ATV61 in IP54 with separated air flow !

Because of the dimensions of the air condition following options in the enclosure door are not possible for ATV61EXS5D90N4...C31N4, D90N...C31N and C11Y...C40Y devices:

- Ammeter
- Voltmeter
- Emergency stop button (Safe standstill)
- Key switch
- Door handle for circuit breaker
- Isolating handle for switch
